The History

Francesco Moser
Gianni Bugno
Tony Rominger

Miguel Indurain
Marco Pantani

40 Anni di Primati e Vittorie!

40 Years of Records and Grand Victories!

ITM, presente da quasi quaranta anni, è sicuramente il brand che, con le proprie innovazioni progettuali e tecnologiche, ha inciso maggiormente nell'evoluzione dei manubri, degli attacchi e dei reggisella, conquistando il ruolo indiscusso di protagonista nel mondo del ciclismo agonistico.

ITM vuol dire prestigiose vittorie legate ai nomi di grandi campioni quali: F. Moser, G. Bugno, M. Indurain, M. Pantani per citarne alcuni.

La costante collaborazione con un gran numero di costruttori di biciclette, il supporto tecnico ai più qualificati teams professionistici e a grandi campioni, fa di ITM un inequivocabile sinonimo di innovazione, sicurezza, affidabilità ed assetti di guida altamente performanti.

ITM, established around 40 years ago, thanks to design, technology and production innovations, is the brand that in recent years has had the greatest influence on the evolution of handlebars, stems and seat posts.

ITM has always been a leading player in the world of professional cycling; its products are linked to victories, records and World and Olympic titles held by champions such as Moser, Argentin, Fignon, Bugno, Indurain, Rominger and Pantani, to name but a few.

Another point of excellence for ITM is its collaboration with a number of bicycle manufacturers, and the fact that for years it has been working side by side with the most highly qualified international professional teams and, consequently, side by side with the top cycling champions.

High
Technology

*Tests e collaudi.
Tests and inspections.*

A collage of images representing ITM's technological capabilities. On the left, a computer monitor displays a software interface with various data points and graphs. In the center, a robotic arm is shown in a blue industrial setting. On the right, a mechanical testing rig is visible, featuring a vertical column and a horizontal arm. The background is a light blue gradient with a faint, stylized graphic of a bicycle frame in the upper right corner.

A collage of three images related to industrial automation. On the left, a computer monitor displays a control interface with various colored buttons and text. In the center, a robotic arm is shown in a blue frame, positioned over a work area. On the right, a mechanical component, possibly a sensor or actuator, is shown in a blue frame. The images are arranged in a collage style with a blue and white color scheme.

Extremely stringent tests are carried out in the ITM laboratories in order to assess the ultimate tensile strength, the yield point of the materials used and other parameters; state-of-the-art instruments are used to subject products to gruelling stresses, to test the reliability and durability of the materials used. The delicate and important internal test phase is completed with the use of bicycles fitted with instruments that use control units to record stresses on the cycle and components according to variations in the riding and route conditions.

40 Anni di Supporto Tecnico ai più Prestigiosi Teams.

40 Years of Technical Support to the Leading Professional Teams.

Per ITM il mondo del ciclismo professionistico rappresenta uno dei punti di riferimento, un test continuo, condotto sul campo, per tradurre le esigenze dei professionisti del pedale, prima in performance di assoluto rilievo e per traslare poi la qualità e la funzionalità dei suoi componenti a tutti gli appassionati del ciclismo. Il legame con il mondo professionistico rimane per ITM essenziale; nella stagione 2005 sono stati 19 i teams professionisti di cui ITM è stata sponsor tecnico, ai quali vanno aggiunti i Teams femminili e Atb.

For ITM professional cycling is one of the reference points, a continuous field test to translate the needs of cycle professionals first into state-of-the-art performance and then to transform quality and functionality into components destined for the huge number of amateur cyclists and those with a passion for cycles and cycling.

For the 2005 cycling season ITM components can be found on the bicycles of athletes and champions from top Italian and foreign professional teams.

As always, the list is particularly rich and, besides 19 professional teams, also includes a healthy array of amateur, women's and Mountain Bike teams.

Vera Carrara - 2005 Points Race World Champion

Fabio Biasiolo - ITM Testman & RAAM (Race Across America) Champion

Millennium Carbon White s.o.

Piega con struttura monoscocca di carbonio ad alto modulo con stratificazione differenziata e rivestimento centrale con doppio strato di fibra "twill" bianco.

Attacco in Ergal 7075 T6 rivestito con due strati di carbonio alto modulo ed uno di fibra "twill" bianco che assicura ottimo assorbimento delle vibrazioni.

Reggisella con testa in Ergal 7075 T6 e canotto full carbon.

The bar has a monocoque structure in cross laminated high modulus carbon fibre with the last two layers in white "twill" fibre extending from the central bulge up to the grip area.

The stem is in Ergal 7075 T6 and the central part is wrapped with structural and white "twill" carbon fibre; this provides a damping action that reduce the effects of ground vibrations.

The seat clamp is in Ergal 7075 T6 and the post is made of full carbon with the last two layers in white "twill" carbon fibre.

OPTIONAL

Millennium Carbon White s.o. può essere corredato di portacomputer in carbonio venduto separatamente.

Visia

Attacco disponibile con piastrina frontale in Carbonio.
The stem is available with Carbon front plate.

Piega anatomica in Ergal 7075 T6 con due canaline. Attacco a 4 viti in Light Alloy 6061 T6 lavorato con tecnologia 3D Forged; il particolare orientamento delle fibre conferisce all'attacco ottime caratteristiche meccaniche. Reggisella in Light Alloy 6061T6 ottenuto mediante forgiatura 3D; canotto rivestito in fibra di carbonio che garantisce maggior rigidità ed assorbimento delle vibrazioni. Il reggisella presenta versatilità e praticità di regolazione dell'inclinazione e dell'avanzamento ed ha il bloccaggio a 2 viti.

New bar made in Ergal 7075 T6; its grip has been given an anatomic shape. The bar is provided with front and rear groove. The Visia stem is a 4 bolts made in Light Alloy 6061 T6 with 3D forged technology, the particular stratification of the fibres provides the stem with excellent mechanical properties.

Seat post made in Light Alloy 6061 T6 by 3D forging; the seat post tube in Light Alloy is wrapped with carbon fibre that guarantees greater rigidity and really effective vibration absorption.

The seat post has two bolts and offer optimum versatility in angle and forward adjustments.

Disponibile anche in versione classica strada.
Available also in shallow classic grip version.

Appendice Clip on Bar

Olympus

Nuova appendice per triathlon realizzate in Alloy 5754 T6. Appoggiabraccia in Alloy 6082 T6. Cuscinetti in spugna EPDM100. L'appendice è adatta a qualsiasi manubrio \varnothing 25,8 o 31,8 mm di sezione circolare. La struttura monoblocco consente il fissaggio del supporto appoggiabraccia su tre differenti posizioni con correlata riduzione dell'estensione.

Clip-on bar made of Alloy 5754 T6. Alloy 6082 T6 armrest. EPDM100 sponge pads. Olympus clip-on bar is suitable for any handlebar \varnothing 25,8 o 31,8 mm with a circular section. The special single-piece structure allows the armrest support to be fixed in three different positions with an associated reduction of the extension.

NASTRI/TAPES

NASTRI IN CARBONIO CARBON TAPES

Nastri per rivestimento manubrio ed appendici manubrio realizzati in materiale antiscivolo ed antisudore che assicura un ottimo "grip". I nastri ITM sono disponibili nei colori bianco, nero, rosso, giallo e blu ed anche in finitura carbonio bianco e nero.

Professional handlebar ribbon. Great grip comes from the anti-perspiration and anti-slip features of the ribbon surface. ITM ribbons can cover any kind of handlebar or extensions. ITM ribbons are available in white, black, red, yellow and blue colours and with black and white carbon fibre surface also.

CUSCINETTI TECHNOGEL/ARM RESTS TECHNOGEL PAD

P.O.P.

MILLENNIUM GRIP

Gusci realizzati in polipropilene modificato, un materiale opaco antiscivolo, con inserti in gomma SEBS soft-touch antisudore.

I gusci Millennium Grip sono dotati di passaggio per i cavi freno e deragliatore; sono leggeri, ergonomici, di facile applicazione e consentono una più confortevole impugnatura del manubrio. Sono applicabili a tutti i manubri anatomici ITM.

A pair of coverings made of modified polypropylene which is an opaque anti-slip material with SEBS soft-touch anti-perspiration rubber insets.

The Millennium Grip coverings have a way for the brake and the derailleur cables; they are light, ergonomic and easy and quick to assemble and allow a comfortable grip of the bar. Millennium Grip Set can be used with all ITM anatomic bars.
