Sole

- **VIBRAM® SOLE** The Northwave R&D department tapped the technology and experience that VIBRAM® placed at its disposal to create a sole specially designed for off-road use. The special design of the tread gets rid of mud optimally, and together with the VIBRAM® compound, it guarantees maximum grip on all types of surfaces. The structure of the sole is designed for using MTB pedals and at the same time to offer the right position when walking. VIBRAM® rubber guarantees the maximum in terms of performance and durability, even in extreme conditions.

- **CROSSROAD SOLE** This sole has been conceived for double purpose use: walking and pedaling. Its calibrated rigidity makes it ideal for all-purpose use. The rigidity of the arch-support is also calibrated on multifunctional professional use.

- **JAWS CARBON REINFORCED SOLE** A sole made of thermoplastic material enriched with carbon powder that thanks to its peculiar shape guarantees a high degree of rigidity while staying lightweight. The front end of the sole is divided into two parts: a mid-sole in fiber with added carbon powder and an outsole. The natural rubber rear part had been designed to ensure maximum grip also during descents.

- **NRG CARBON REINFORCED SOLE** Produced in Zytel DuPont composite fiber thermoplastic material enriched with a glass + carbon fiber layer adding to standard rigidity, it incorporates a laterally adjustable fastening system. A new design allows to maintain a short foot/pedal distance and to adjust shoe/crank distance.

- **HAZE ZYTEL DUPONT SOLE** The midsole in Dupont Zytel nylon, a thermoplastic material made of composite fibers, guarantees excellent rigidity to the sole. The outsole with Hi-grip pattern is made of the best synthetic rubbers. Compatible with all Mountain Bike pedals, the front part can also be fitted with studs. Increased rigidity allows energy loss to be minimized.

Speed Lace System

Continual research into innovative solutions has given rise to a new closing system for cycling shoes: the Speed Lace System. Combining the simplicity of traditional lacing with a special mechanism, Northwave's R&D department has created a fast and functional closing system. For a perfect hold on the foot, just pull the cord and push the mechanism downwards, automatically locking the lacing in place. It is easy to release simply by pressing on the lever and pulling the mechanism upwards. The SLS system guarantees perfect, simple and speeding lacing of the shoe.

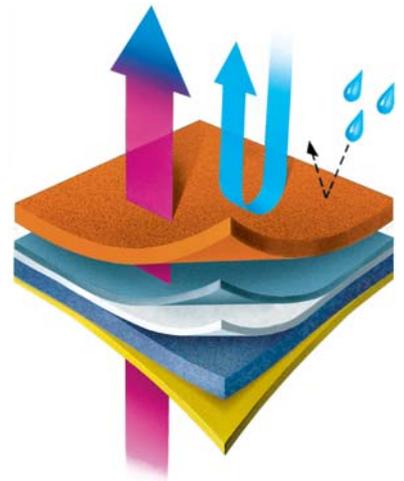

Membrane

MEMBRANE GORE-TEX®

The first bike GORE-TEX® shoes launched exclusively by Northwave guarantees all-out water protection combined with excellent breathability. All this means top comfort feel on the move with all weather condition. The microclimate created inside the shoe makes you confront the longest trips out without fatiguing or overheating your feet. Northwave & WL GORE winning partners when you're on the attack. GORE-TEX®, Guaranteed to Keep you dry, Gore® and designs are trademarks of W. L. Gore & Associates.

Northwave was the first brand to launch cycling footwear using Gore Tex. The experience gained in recent years has given rise to a new model of technical winter shoe. A combination of high-performance materials and technical detail, offering maximum comfort in the most extreme conditions. The Gore Tex lining guarantees thermicity and allows transpiration, keeping your feet warm and dry. The exclusive SLS (Speed Lace System) permits fast and secure closure, protected by a Velcro strap. The Jaws sole, with added carbon powder, provides rigidity and excellent grip thanks to the tread made from natural rubber. A shoe that protects from the cold, designed for true mountain biking enthusiasts who take on the most challenging routes even during the coldest seasons. The upper provides optimal coverage of the foot, guaranteeing comfort and protection, with the performance of a highly technical shoe.

Designed for pedalling on all types of terrain and in all weather conditions, Gran Canion is the right product for the excursionist who wants to tackle difficult off-road trails.

The GoreTex® XCR lining insulates the foot from all atmospheric agents, guaranteeing maximum breathability and maximum performance. The sole lets you pedal both with free pedals and engaging the pedals, and is designed for walking easily when you get off the saddle. The upper offers optimum protection, and the Velcro strap provides precise closing.

The Expedition model is born with an outdoor style and the technical features of a specific mountain bike shoe. The GoreTex® XCR lining insulates the foot from all atmospheric agents, guaranteeing maximum breathability and maximum performance. The ideal shoe for the cyclist who is looking for a versatile product for pedalling and walking off-road.

The particular design of the sole and the Vibram® compound provide grip and stability in all conditions, and on all types of terrain.

FREERIDE

Specific footwear for freeriding, with all the characteristics of a technical product. Materials better suited to the needs of cyclists who pedal off-road in the middle of dust and mud on bumpy trails were selected for the upper. The structure of the shoe provides protection and optimum closing without forgoing comfort. The toe and heel counter are well protected and the foot is well stabilized. The Vibram® sole also lets you pedal with the shoe engaging the pedal and walk easily when you get off the saddle.

FOOTBED
AIR SPORT

A multipurpose shoe for using the bicycle in the city and also for outdoor excursions owing to its special rubber sole that lets you walk easily when you get off the saddle. The upper is lightweight and very comfortable, plus it offers excellent ventilation. The Velcro strap makes sure the shoe is closed right during pedalling, protecting the laces. A product designed for cycling but versatile in its use, for both those who pedal every day and those who enjoy the bicycle in complete freedom.

col. 10 BLACK
size 37 • 46

▲ CUSTOM FIT HEEL

The supporting element in rigid polyurethane has been designed specifically to be complemented by Velcro adjustment straps. Greater comfort during pedaling, guaranteed by the optimal and stable position of the heel.

🔒 GEL PAD CLOSING SYSTEM

The polyurethane gel structure, adjusted by two side straps, ensures excellent stability and comfort. The Velcro positioned on the back allows customized adjustment of the heel closure. Customized closure, without pressure points, ensures optimum comfort. Maximum foot retention for greater stability.

👣 HAZE ZYTEL DUPONT SOLE

The midsole in Dupont Zytel nylon, a thermoplastic material made of composite fibers, guarantees excellent rigidity to the sole. The outsole with Hi-grip pattern is made of the best synthetic rubbers. Compatible with all Mountain Bike pedals, the front part can also be fitted with studs. Increased rigidity allows energy loss to be minimized. Excellent grip on the entire sole surface. Moderate weight.

col. 11 BLACK/WHITE
size 36 • 46

SPINNING

The Spinn model continues its success as the most popular shoe for gym use and among indoor cycling enthusiasts. The special construction of the upper allows optimal ventilation of the foot and also permits use without socks. Its performance is guaranteed by the quality of the sole which is just rigid enough and constructed in non-marking rubber. The fastening gel flap adjusted by two independent velcro strips keeps the foot in place even during maximum exertion.

code 80164001

MAD MAX

SKATE UPPER

The upper's style draws its inspiration from the street and skate style. The materials used –suede and mesh– ensure utmost breathability while at the same time maintaining effective retention and protection of the foot from any blows. The inner construction of the upper is asymmetrical, and it has been designed so as to best protect the malleolus from any blows on the pedal crank in the case of disorderly landings.

SKATE DIRT SOLE

The Skate dirt sole was developed for those who love to spend the day on dirt tracks trying out the most extreme tricks. Its skate look goes along perfectly with its features of lightness and comfort. The tread is made of natural rubber so as to offer maximum grip on the pedal's teeth. The midsole is made of soft EVA, which ensures optimum shock absorption of the knocks without penalizing its lightness.

**DIRT SKATE
RUBBER**

PROTECTION SYSTEM CLOSING

Although it has a broad fastening system on the instep so as to retain its street identity, the Mad Max model is able to ensure an optimum and particularly high-performing closing thanks to its combination of laces and Velcro fastener. This guarantees support and optimum closing along the entire surface of the instep.

URBAN REVENGE

The technical detail and materials used in cycling shoes have now been adapted to create an exclusive model. A leisure shoe to put on after competitions so that you can stand out even when you are not astride your bike. The soft, microporous sole and rubber tread allow you to walk in total comfort.
