CLIMALITE — Fabric that keeps you dry by pulling moisture through the fabric and away from the skin.

CLIMACOOL — Ventilation and moisture managing fabrics let your body breath from every pore.

CLIMAWARM — Synthetic fabrics designed to keep you dry and comfortable by trapping warm air close to the skin while allowing heat-sapping sweat to escape through evaporation.

CLIMAPROOF — Climaproof is available in three different levels of protection depending on the weather conditions and the level of sport intensity.

CLIMAPROOF WIND — Climaproof Wind is the most breathable, lightweight level of protection for those moving fast and throwing off a lot of heat and sweat. It is perfect for cycling in cool damp conditions. It keeps you warm by blocking energy-sapping wind, while allowing the maximum of sweat to evaporate away from the skin.

CLIMAPROOF RAIN — Climaproof Rain is wind and waterproof and built for extreme conditions where maximum protection is needed over a long period.

CLIMAPROOF STORM — Clima Proof Storm is highly wind and waterproof and built for extreme conditions where maximum protection is needed over a long period.

BodyMapping

Body Mapping is a concept that helps us understand your body better so that we can place the right technology in exactly the right area to keep you drier, more comfortable and performing at your peak in all types of weather conditions.

Fit, A science? A technology? A know how? An art?

Good fit is tough to describe. For the rider it is invisible and you can't feel it unless there is a problem. For the adidas cycling product team, we use our experience with cycling apparel and as cyclists in addition to modern constructions techniques to optimize fit and to make sure that you can think less about fit and enjoy your ride.

Race fit | Speed fit | Comfort fit

FORMOTION™

ForMotion apparel follows every curve of the athlete's body, flowing with the natural movement of sport for a better fit and greater comfort.
