Storck Bicycle

For over 12 years Storck has been developing innovative, ground breaking and timeless products which have won numerous tests and design awards. This year we have created several new highlights, which continue the proven Storck tradition. Products which offer the best compromise of longevity, lightweight and strength on- or off-road. Characteristic for Storck: the continuous re-development of existing technologies, the application of the most modern materials available and award winning design. Numerous innovations which are standard features today were developed, patented and introduced by Storck. No other manufacturer takes such intensive care of its products, our designs are never out of date. Our bikes must match the individuality of their owners – this is why you can configure your own personal dream bike and truly experience the fascination of owning a Storck.

The Storck Team.

Parts

Storck frames and parts share the same attributes: design, innovation and quality. Storck Components –stems, seat posts, handlebars, cranks and forks are built to fit our frames both functionally and visually. Before starting development we establish the demands and test parameters for every product. Function and form are the highest priorities for Storck products. Every component is subject to strict, independent testing before entering series production.

Storck owners pay attention to detail, with our components your individual bike reaches perfection. Ask your dealer about our range.

Powerarms SL

New, lighter, stiffer. This new unique crank set is marked with integrated bearings and axle as well as a new dynamic design.

3 lengths: 170,0, 172,5, 175,0mm

Carbon crank set (without chain rings), integr. Ultra precise high grade alloy axle
