JIM 'HACKSAW' SEVERT RIPPING THROUGH THE MOUNTAINS OF L

Welcome

Whether you're racing, dirt jumping, or riding street, you need durable products that perform. From Atomlab's beginnings over ten years ago, we have had one goal; to make products that are light enough to race with and strong enough to survive the burliest riding. This year we have continued our pursuit of this goal with our new GI60 dirt jumping forks, Trailking frame, General Issue cranks, and a host of other new products. We are also introducing a line of disk brakes to go with our new hydraulic Twister that allows a 360 degree turn of the bars.

Give our products a try. We've put our heart and soul into them and we're sure you will be impressed. Keep riding hard and don't be afraid to pick up a shovel!

Team

The Atomlab team is truly that, a team. Each one of our riders has a long history with the company and were riding Atomlab products years before we ever organized the team. These guys represent what we're all about. Hacksaw, Joe, Thomas, and John are all amazing riders who live to ride. We rely on their input and experience as we develop and create new products. Thomas is actually an experienced frame builder and has designed our new Trailking frame. Although these guys do compete, our focus is more about traveling and riding. We would also like to welcome our newest rider, Howie Zink. Welcome aboard!

John Tesme
JJMF

Complete Bikes

Our complete bikes are made almost entirely of Atomlab parts. There are no cheap, generic parts, just the good stuff.

We offer a Pimp2 or Trailking frame with a full General Issue build including our new GI60 Dirt Jump fork and General Issue cranks. These bikes are dialed and ready for action with everything from 25-12 gearing, custom white wheels, 3" bars, Atomlab Three26 tires, etc.

Topping things off, we have a special Team Issue Trailking bike that comes with our Pimp rims, Pimp bars, Pimplite stem, and Pimp disk brakes. This is absolutely the finest hardtail dirt jump bike you can buy at any price.

All of these complete bikes are available in classic white, black, and red colors with black & white components.

Jump Forks

We've created a dirt jump fork from the ground up. The GI60 was specifically designed to be strong, light, and really stiff. We also wanted it to be rider serviceable and inexpensive. What we came up with is a full cromoly fork that uses springs and elastomers for 60mm of very stiff travel. This isn't a suspension fork - it's a dirt jumping fork. The fork is designed to soften really hard impacts and save your wrists, not to absorb bumps as you're riding along. It does move a little as you ride, but it doesn't bob up-and-down and take away your pump, energy, or control as you ride rhythm sections, carve bowls, and do technical tricks. The system is extremely simple and has no adjustment. The stiff springs move slowly so that rebound is easy and predictable - not springy. Your hardtail will finally ride the way you always wanted it to.

The cromoly uppers undergo a thermal post-weld process for added strength. The 20mm spindle uses big axle nuts so that the system can be securely tightened for stiffness. The fork's simplicity keeps it inexpensive and easy to work on. Any reasonably able rider or mechanic can disassemble the fork, replace parts, and reassemble everything in minutes. We offer replacement parts and service. So if you ever break anything you can simply fix it and get rolling again, and that is a whole lot better than replacing your fork every 3 or 4 months. GI60's are definitely tough as hell.

The stock 3.8mm spring is designed to be super stiff for smaller riders, but still solid for larger riders up to 240 lbs. We offer an extra stiff 4.0mm spring for riders who want something extra rigid.

2FRK120B	Inner Bolts

Weight 5 lbs

GI60 Forks come with a 51mm International Std. Brake mount.

Frames

Pimp2

The Pimp2 is a blend of our previous frames. High quality aerospace cromoly construction and our classic dirt jump geometry give this frame the handling, predictability, and durability needed for skateparks, dirt jumps, and street riding. It's also a great 4x/DS race frame.

FORKS -

These frames were designed for 80-100mm forks for 'bmx' type riding, but when you use a longer fork the geometry changes to more 'mountain' style geometry.

Pimp Disk Brakes

We've been working with Bengal Hi-Performance for some time now as a co-sponsor of our team. As we moved forward with our Hydro Twister gyro, we saw the need to develop a brake to go with it. Bengal has been making brakes for the biggest names in the industry for years, and are the perfect partner for our new brake program. Our new Pimp hydraulic brakes feature dual piston activation, a patented 'Aorta' valve at the lever, DOT 4 fluid, a 2-finger lever and a silver braided cable. The mounts are 74mm international standard with 51mm adapters available. We even offer a complete rear brake set with a Hydro Twister that is bled and ready to roll.

General Issue Brakes

Our GI cable disk brakes have an internal cam that increases leverage and power.

1BRK502B	Pimp Wave Rotor, 203mm

After years of concept work, the HydroTwister is here. The Twister fits between your stem and headset in place of steer tube spacers and has a stack height of 25mm. Simple to install, you just connect a short bit of cable from the Twister to your lever and another from the Twister to your brake caliper and you're ready to start throwing barspins. We also offer a star-fangled nut with a hole through it so you can run your front cable through your steer tube so your entire braking system is spin ready.

Handbuilt Wheels

Pimplite front 1073g
Pimplite rear 1243g

Our complete wheelsets are second to none. Our Pimp and Pimplite wheels are laced with our precision hubs, white triple butted spokes, and oversized red aluminum Torque nipples. The General Issue wheels are built with the same precision hubs, white straight gauge spokes, and nice, long black brass nipples. Each wheel is handbuilt and the tension of each spoke is calibrated and double checked. You can be guaranteed that your wheel is built tough and ready to ride.

All of our wheels and rims come with the finest synthetic rim strips. The Pimp and Pimplite's come with red rim strips and the General issue wheels and rims come with army green strips.

1SPK100W	GI 26" Spokes, 36pc White

Torque Nipples

Torque nipples are lighter and stronger than standard brass nipples. They not only lighten our wheels by over 20g, their wide alloy interface creates a stronger, stiffer wheel. The torx socket back (instead of a slot for a flathead screwdriver) makes it easier to build wheels and the large wrench interface makes it much easier to tension the spokes. Also, the connection at the spoke hole has a larger pivot range which reduces the stress on the spoke.

1SPK004	T-20 Torx L-Wrench

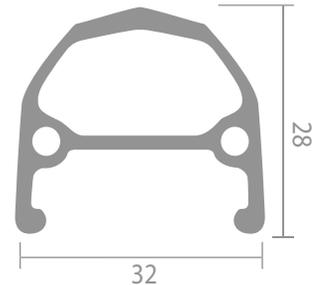

Pimp Rims

Pimp rims are the lighter, stronger descendent of our legendary Trailpimp rims. The nice, big box section provides structural strength and the short, thick sidewalls prevent flat spotting. All this strength and still they are lighter than most of our competitors. Pimp rims set the standard for strength and reliability.

Aircorp Pedals

The original thin profile pedals. Aircorp pedals are widely known for their feel and control. The CNC machined bodies use M4 allen bolts for traction and our double 'DU' bearing system for durability. We precision machine our nearly indestructible cromoly spindles which are held on with a sturdy M6 bolt.

PART NUMBER	PRODUCT
1PED121B	Aircorp Pedals, Black
1PED121R	Aircorp Pedals, Red
1PED121G	Aircorp Pedals, Green
1PED012B	Spare Traction Pin Kit

Trailking Pedals

The choice of dirt jumpers and street riders around the world. Trailking pedals have the same high end features as our Aircorp pedals, but with a longer spindle and more traditional look. They also have fewer traction pins so it is easier to move your feet around as you work the bike.

PART NUMBER	PRODUCT

Three26 Tires

The Comp 3 BMX tire from the 80's was the best tire ever made for semi-loose, semi-hardpacked conditions, like the ones found on singletrack, slalom, 4-cross, and dirt jumps. The Three26 is a 26" tribute to the original. We combined super tacky rubber and the Comp 3 tread pattern for grip with thick, sturdy sidewalls that won't roll over when you carve a turn or land sideways on a big hip. These tires were long overdue!

PART NUMBER PRODUCT

1T1R261B Three26 Tire, 26"x2.1"

1T1R262B Three26 Tire, 26"x2.35"

General Issue Cranks

These cromoly 3-piece cranks are simple, reliable, and easy to install. The arms slide easily onto the tough hollow cromoly spindle and are secured with the spindle bolts and the crank arm pinch bolts. You won't need a mallet to install these cranks. They come with a sealed, four bearing MTB bottom bracket.

Tough as Hell DVD

The BlkMrkt Bikes team is charging into the future with a flurry of whips, flips, and 3s with an amazing push of aggression and amplitude that has to be witnessed. We rolled with Carter Holland, Adam Hauck, & Phil Sundbaum around the US, Canada, and Europe and captured the carnage. There's also footage of other Atomlab riders like Joe Perrizo, John Jesme, Hacksaw, and many others. 1DVD001 - TOUGH AS HELL

Apparel

Look good and support the cause with quality 100% cotton tees and embroidered mesh hat.

Trailking Frames

We have a handful of these available for sale right now

OUT NOW!

While Tom justly working on the frame for over a year, learn rear and frame builder, Thomas Husted designed and designed the thing and it's got. Thomas created a floor to ink the chainrings to the bottom bracket that allows for an amazingly short rear end. The short rear end made the bike incredibly nimble so it's much easier to handle, lift, and maneuver. It's compact and weighs just 5.6 lbs. The bike shown here is Mike Farwell's new ride. Love that ride.

This light like chromoly bike is the key to the short rear end. You'll notice that we had to bend the seat tube for the clearance.

The Trailking comes w/ integrated sealed headset

The dropouts race and small and have a built in disk mount

Here is a top view of our chromoly 0160 Plus shown w/ self suspension
