

# New Products From ZIPP® for 1991

## ZIPP® 2001

The Zipp® 2001 frame shows the innovation and imagination of Compositech. This frame will certainly get second looks. The Zipp® 2001 will truly change the format of bicycles into the twenty first century.

The Zipp® 2001 is a collaboration between Leigh

Sargent of Zipp®—Compositech and Ralph Ray of Spin Coach, Desert Princess Fame, creating a mix of advanced composite structure and leading edge frame configurations.

Based on the Allsop Softride Suspension System\*. The frame provides low fatigue, increased handling, improved power transfer and ease of holding an aero-position of long durations.

The 2001 frame by Zipp® is less than two pounds. The 100% carbon fiber frame is B.C.I. molded incorporating sandwich construction, the first frame of its kind. The rear drop outs are interchangeable for both 26 inch and 27 inch wheels without having to undertake major brake adjustments. These are just a few of the features of the 1991 Zipp® 2001. Call Zipp® for more information.

The unusual shape of the Zipp® 2001 allows it to be very compact in size. In fact, as a reference to size, the Zipp® 2001 will fit into the average suitcase.

Compositech will begin distribution of the Zipp® 2001 in 1991 with Allsop Softride®, Fork, Headset and Rear Break, in your choice of 24, 26, or 27 inch front and combination 27/26 inch rear.

\* Registered trademark of the Allsop Corporation

## ZIPP® 400

Zipp® is the leader in Advanced Composite Rim Technology. And, our new 400 spokable rim just adds security to that statement. This deep rim allows for high strengths and greater spoke angle for an overall stiffer wheel. The 26 inch rim at 400gms is durable and light.

The Zipp® 400 spokable rim is constructed of 100% carbon fiber with a glass breaking surface, bladder molded and left with a natural graphite finish for light weight.

The 400 by Zipp® will be available from Compositech in early 1991 with spoke counts from 12 through 32 and is provided unlaced. The Zipp® 400 laces the same as traditional rims therefore general maintenance and spoke replacement is simple.

We look forward to a high volume top quality product with the Zipp® 400.
