IDENTITY

Cionlli's insistence on value is
your competitive advantage.

For nearly 30 years Cionlli has been devoted to the production of bicycle saddles. During this time, we have come to include five manufacturing bases in Taiwan and Mainland China, meeting the needs of customers from all over the world.

The key to Cionlli's success is not our large production capacity however, rather, our ability to provide the highest level of value. This means superior service and quality. Whether your needs are large or small capacity, we will satisfy those needs.

Cionlli has invested in state of the art saddle making equipment and offers the largest and most diverse selection of products. Every year our team develops innovative and market friendly products. We are your competitive advantage.

CUSTOMIZING YOUR SADDLE

FEATURES

RAIL>>

Imitation Carbon is an option of the rail's finish. Imitation Carbon gives the saddle's finish a high tech look.

Oversize rails are popular on Clonil's BMX and freestyle series saddles. Clonil provides steel, cro-moly and titanium rails in 8mm and 9mm diameters.

Titanium Rails Titanium's light weight and incredible strength are undeniable. Saddles with titanium rails are the highest performing road and MTB saddles available today.

Cro-moly Rails If you are an extremely tough rider, saddles equipped with cro-moly rails suit your riding style.

Rail Scale Clonil's high end and professional saddles can be equipped with the rail scale. This feature makes adjusting the saddle position quick and precise.

SUSPENSION>>

1

Elastomer

Elastomer is a powerful shock absorber. Clonil uses light flexible material to produce elastomer incorporated into our rail structure system a soft ride without bulky springs that easily overcomes any shock.

2

Coil Spring

Coil Spring are designed to absorb most shocks encountered while on the road.

3

Double coil springs

Double coil springs provide superior shock reduction and absorption extra comfort and performance.

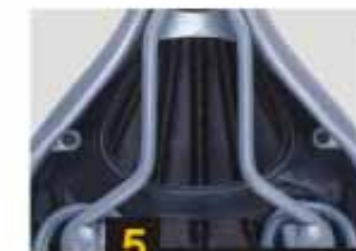

4

Air Cushion Suspended Rail System

Air Cushion Suspended Rail System is the best way to add extra comfort without adding extra weight. Air cushion suspended rail systems can be added to most existing saddles offering the highest possible saddle suspension and comfort.

5

Sector Spring

For even more comfort while riding, Clonil's **Sector Spring** distribute weight evenly and greatly reduce impact pressure on the saddle.

FEATURES

All Cionli saddles can be changed or modified to suit your customer's requirements. Please find all of the information about the different parts of the saddle that can be modified on the page below.

PADDING>>

Because foam padding can be vulnerable to water damage through stitching holes, Cionli developed our new Dual Cover solution. The Dual Cover works by providing excellent water proofing in any situation.

To reduce the pressure on sensitive areas from continued riding, Cionli developed Dual Foam Padding. Dual foam padding works by combining a firmer base layer of foam covered by a softer upper layer of foam. Padding twice in this way increases comfort and riding time flexibility.

Only the highest quality materials go into producing Sebe Gel. Cionli uses Sebe Gel on saddles' key points to absorb and release pressure away from sensitive areas. Sebe Gel is extremely well suited for long rides.

Cionli saw the promise of memory foam for use in the medical industry to relieve pressure sores. Over the years memory foam was shown to be unique in the way it responded to temperature and also in ability to spread pressure over a greater surface area (and thereby reduce pressure points significantly).

COVER>>

Cionli uses highly accurate molds and quality materials to produce the picture perfect and soft to the touch Cushioning Vacuum Cover saddle. This in-mold process uses no staples resulting in a clean and comfortable look.

For unicycles and exercise cycles, Cionli employs its uniquely formed, skin pattern process.

OTHERS>>

Another option to reduce saddle weight and center ridge pressure on sensitive body parts is Cionlli's Center Gap. Because there is no center ridge, comforting air flows through and weight is redistributed to seat padding as the seating position shifts to a more ergonomic position.

Cionlli seat posts are an inexpensive, basic option welded directly to the saddle.

Double infusion is firm PP material combined with a more flexible material to release pressure greater than single injected models can. Double infusion also enhances anti-slip and bump functions on the BMX series saddles.

BASE>>

Cionlli's Front Bumper is an attractive looking saddle edge, protecting the saddle against falls, bumps and scrapes. In our BMX series the front bumper also provides grip.

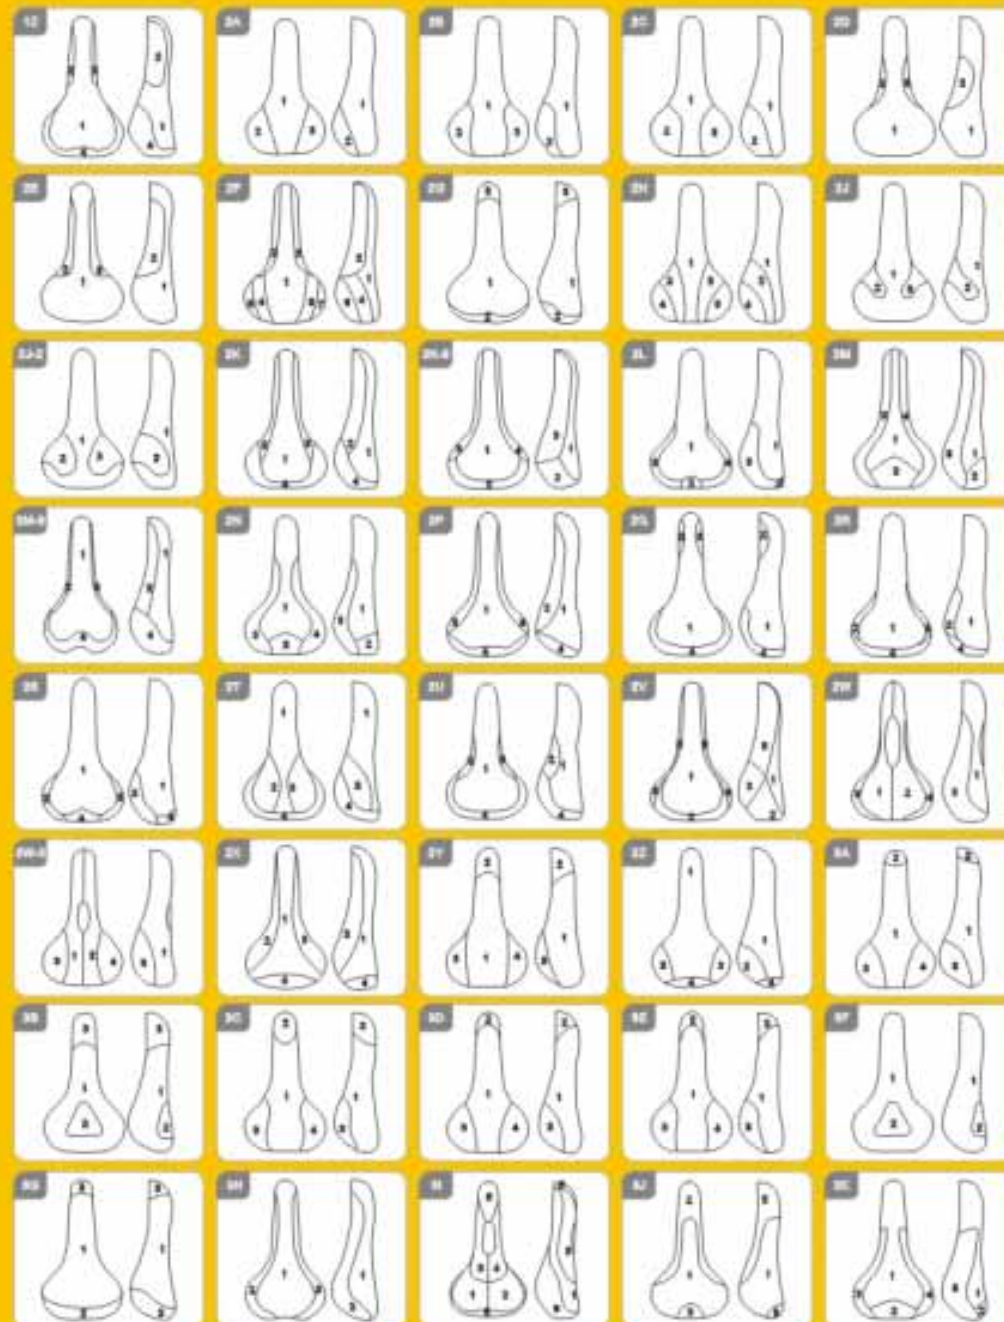

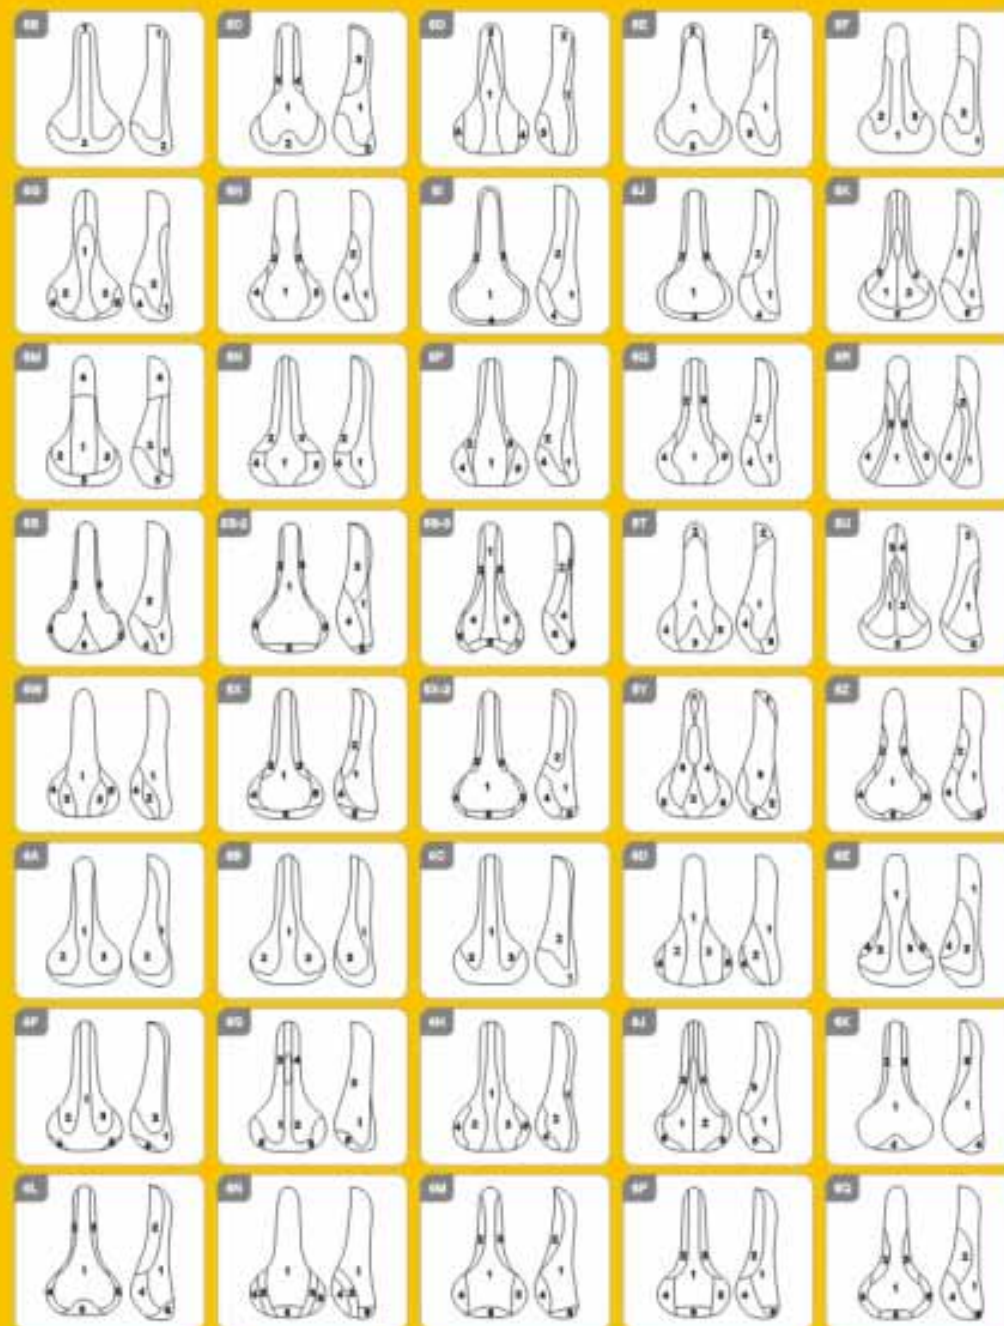

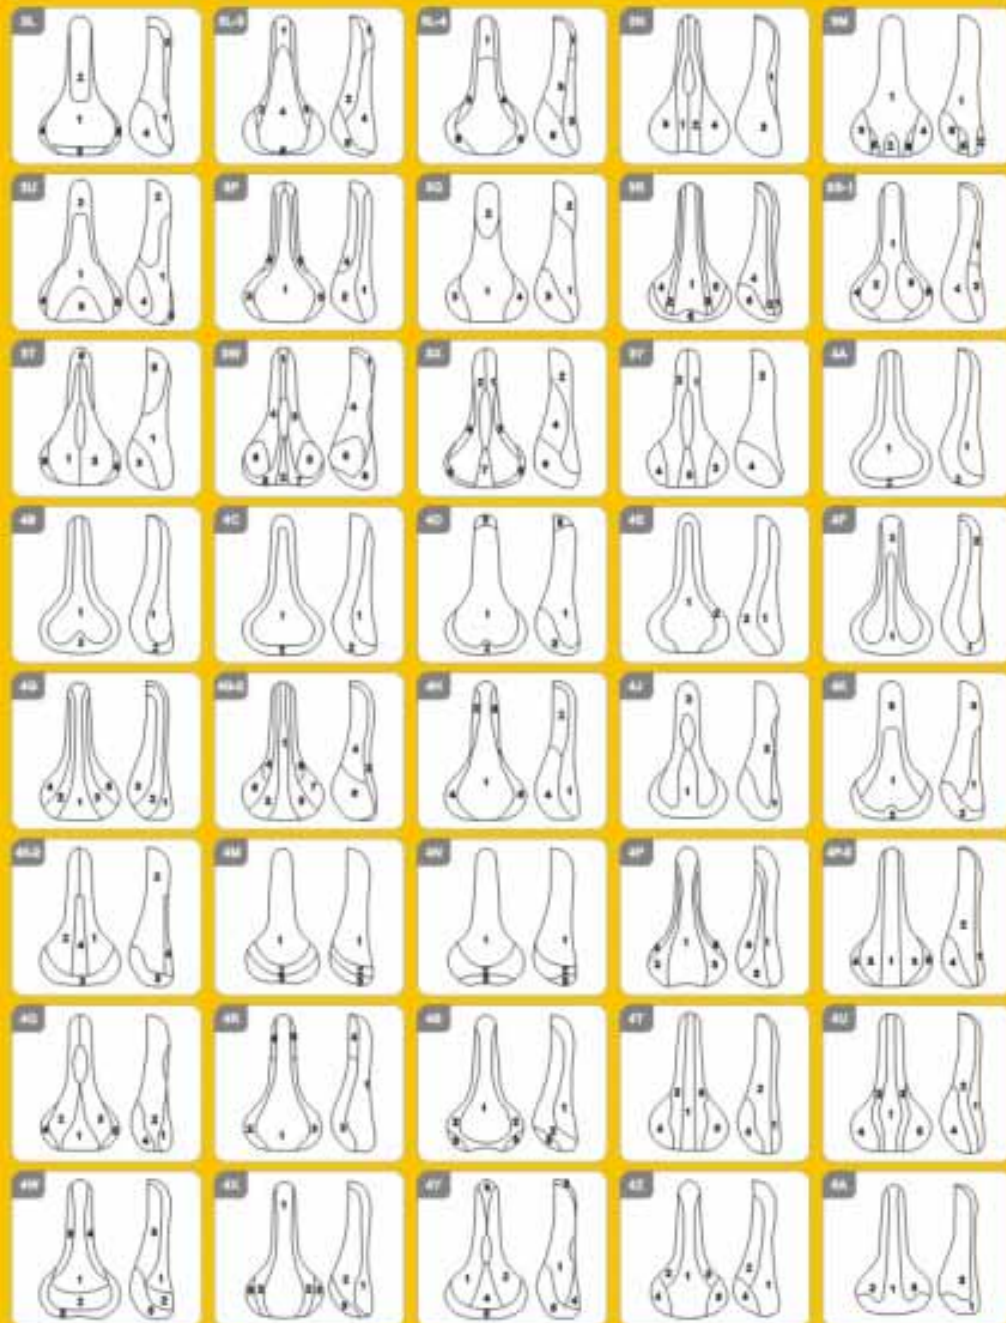

Cionlli's Rear Bumper is designed for saddle strength and protection, and gives a clean, finished look. In the BMX series the rear bumper is easy to grasp and provides extra grip. The rear bumper is available in several materials.

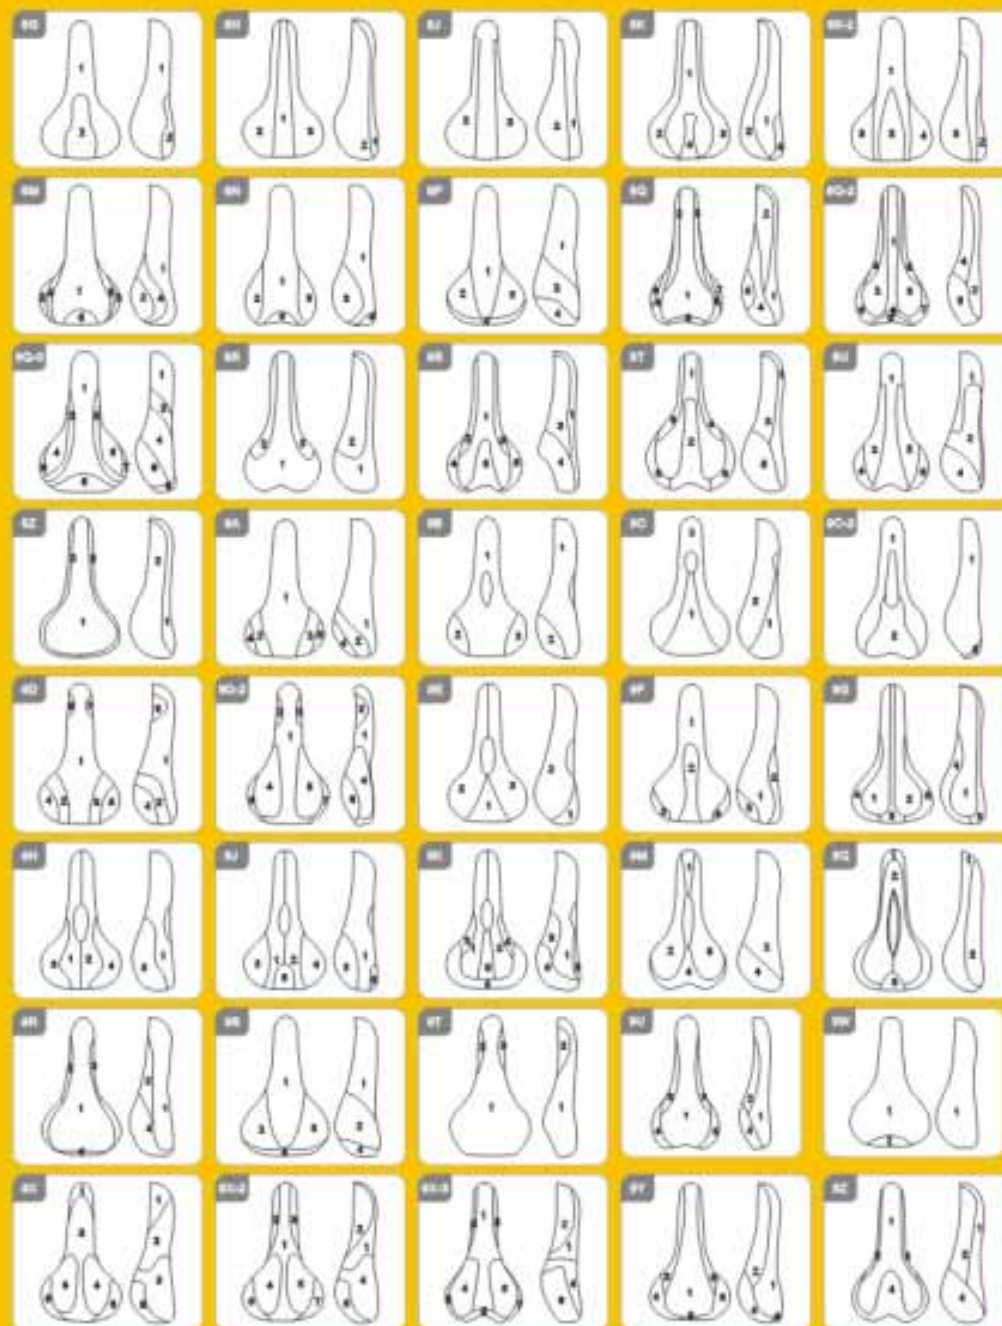

STITCHING PATTERNS

One of the best ways to customize your saddle is by selecting materials, textures, and colors and then specifying your stitching pattern. This process ensures your saddle will stand out from the competition. Simply choose the cover material you prefer, select your stitching pattern and we will do the rest.

MTB

Cionlli mountain bike saddles are made to withstand the punishment endured while riding on rough terrain. We know you are looking for a saddle versatile enough to respond to demanding riders. Even the most seasoned professionals will appreciate our line of MTB saddles with unique features such as carbon fiber seat bases, titanium rails, and Micro Fiber covers.

JUNIOR

Who can forget their first time riding a bicycle? Remember that burst of exhilaration, speed and freedom of flying over the road? You and your friends riding all day long, going to places only you knew about. Cionlli junior saddles are made for comfort and durability, with cool colors and prints blended into the cover. Soft foam padding and durable seat cover materials provide a seat that kids can use for hours on end, and survive the punishment only kids know how to deliver. Whether for riding to school or just for fun, Cionlli knows what kids need.

CITY

While riding through town on a beautiful day comfort is key. Comfort is what the Cionlli City series of saddles provides. Ergonomic design conforms seamlessly to the bodies curves. With unique features such as soft and thick "memory" foam and rear coil springs, it's like riding on a cushion of air. Wouldn't it be great if the weekend could last just a little longer?
