

Bicycle Tire Range | 2005

133 years of experience

Continental
GET THE GRIP 

More than 100 years experience in the development and production of bike tires has made Continental the outstanding company that it is. Continental's unique market position is also evident in its product range for cyclists: Continental tires are not only designed at the Continental Two-Wheel division's technology and development center in Korbach in the German state of Hesse, they are also manufactured to a large extent in Germany. As global player Continental does, of course, operate high-tech manufacturing plants out of Germany, but the focus is still very much on "Made in Germany". Continental is thus the sole German bike tire manufacturer! Knowing this serves as a mighty incentive to our engineers and everyone else involved in manufacturing to constantly strive for further innovations. Together with cycling greats – the T-Mobile team, for example – professional products like the Grand Prix racing tire are churned out. Genuine "Made in Germany" – well out of sight of the competition.

Backed up by cutting-edge equipment, Continental's test engineers have sharp eyes when it comes to pinpointing irregularities. No detail is so minuscule as to escape their attention. We are thus able to specifically optimize our new developments and subject competitor products to close inspection for strengths and weaknesses.

The drum test rig fast-forwards the tire aging process. In load endurance testing our developers pack the load a tire undergoes in its lifetime into a condensed simulation. This minimizes the time required to determine which design changes will bring about maximum improvements in durability and mileage performance.

Hot Staff.

Germany, Continental production plant, Korbach 2004

Bicycle tires heating mold section:

For Continental working, f.l.t.r.: Joachim Wagner, 15 years; Bodo Rikic, 13 years

133 years of experience

Tire manufacturing is a proven tradition at Continental. Our tube tires are hand-crafted with meticulous attention.

More than the sum of its parts. In building the Twister Supersonic, our employees take great care in ensuring that the structural parts are positioned for excellence.

The Kevlar bead is wound and cut to length on the building drum.

Did it pass the acid test? Hot out of the vulcanizing presses, our tires are already subjected to a visual check.

**These ladies
are indispensable.**

A steady streak of victories with Continental

What do Erik Zabel, Robbie McEwen and Thor Hushovd rely on when they turn on their turbo for the sprint?

What would Peter von Petegem and Steffen Wesemann never even attempt to get by without when coping with tortuous cobblestone in the Spring Classic races?

What do Tyler Hamilton, Andreas Klöden and Jan Ullrich rely on when they take on the uphill stretches in the world’s most gruelling tours?

These stars would never even think of trying to get by without three things. Personal strength, the power of the team – and tires from Continental!

The brand that makes world and European champions

For many years now Continental has been the brand that makes World, European and Olympic heroes. Continental has accumulated more precious metal on the track than any other brand.

The highlights of top performance in 2004

1st place / Vuelta Andalucia – J. C. Dominguez (Saunier Duval) **3 x stage victory** / Paris-Nizza – A. Vinokurov (T-Mobile)
1st and 2nd place / GP Miguel Indurain – M. Kessler (T-Mobile), M. Perdguero (Saunier Duval) **1st place** / T. d. Languedoc Roussillon – F. Moreau (Crédit Agricole) **1st, 2nd and 3rd place** / T. d. Romandie – T. Hamilton (Phonak), F. Jeker, L. Piepoli (Saunier Duval)
1st and 2nd place / Flandern Rundfahrt – S. Wesemann (T-Mobile), L. Hoste (Lotto-Domo) **1st place** / Vuelta Cantabria – M. A. M. Perdiguero (Saunier Duval) **German Championship** – A. Klöden (T-Mobile) **1st place** / T. d. Suisse – J. Ullrich (T-Mobile) 2nd place / T. d. France – A. Klöden (T-Mobile) Green jersey, **2nd and 3rd place score** / T. d. France – McEwen (Lotto-Domo), T. Hushovd (Crédit Agricole), E. Zabel (T-Mobile) **2 x stage victory** / T. d. France – McEwen (Lotto Domo) **1 x stage victory** / T. d. France – T. Hushovd (Crédit Agricole)

What's so special about a Continental racing tire? Is it its durability, its firm grip, its superior breakdown resistance, low rolling resistance or look of "speed"? Actually, it's mainly the many skilled hands a Continental racing tire passes through when being made. Cycling is a passion. As is German craftsmanship!

Germany, Continental production plant, Korbach 2004

Race Tires

Set Grand Prix Attack & Grand Prix Force

A front and rear racing tire system
Front and rear tires have different tasks. Steering and braking forces are transmitted on the front, whilst the rear transmits the driving forces and bears the majority of the cyclist's weight. Subsequently, the two tires in the Continental TirePositioningSystem (TPS™) have been designed differently.

The tread compound of the GP Attack (front) is designed for excellent grip, both on dry and wet roads. The GP Attack provides good cornering stability when heading down hot mountain roads in the summer, and holds the road superbly when racing along rainy stretches in the autumn. With a width of 22 mm, sharp corners are a breeze and this narrower dimension keeps air resistance and weight down to a minimum.

On the rear wheel, GP Force guarantees superior power transmission. 23 mm wide, consisting of an ultra fine nylon fabric and protected from punctures by a double breaker belt under the tread, it embodies the strength of Continental racing tires. The GP Force is constructed for high mileage performance. Traction and cornering behaviour remains stable for thousands of racing kilometres.

Grand Prix 3000

The racing tire reference
Its puncture resistance, ride comfort and extraordinary grip on dry as well as wet surfaces have made the Grand Prix 3000 one of the most popular racing tires in the world. It would be virtually impossible to name all of the racing victories and endless training kilometres that this tire has racked up. Over 100 years experience in building racing tires does indeed pay off. Incidentally, whoever uses the Grand Prix 3000 mainly on touring and long-distance events should give the 25 mm version a try. The enhanced comfort and additional handling reliability and puncture resistance are well worth it for these type of events.

Race Tires

Grand Prix 4-Season DuraSkin™:
The result of experiences at Paris-Roubaix Modelled on the Grand Prix 3000, the Grand Prix 4-Season provides you with even greater puncture resistance thanks to the DuraSkin™ fabric. Lightweight racing tires are especially susceptible to damage on the sidewall. Because of this, each year many cyclists are forced to abandon events, for instance in the Paris-Roubaix race. The DuraSkin™ fabric reinforces the sidewall without significantly adding to the weight of the tire. In 2004, cyclists equipped with DuraSkin™ tires had 80 % fewer flats than those riding on other makes. The compound has also been modified for all-year-round use. You'll cover more kilometres on the Grand Prix 4-Season and won't have to worry about the tire compound hardening and thus the grip performance decreasing. The 23 mm, 25 mm and 28 mm versions also make it possible to select the right tire for various road qualities and comfort requirements.

Faster than the speed of sound
With the Grand Prix Supersonic, your wheels can be tuned to an absolute minimum weight and rolling resistance. The tire, together with a Race 28 Supersonic tube make up just 205 g of your wheel weight! Its slick tread and black carbon compound make it true eye candy! The Grand Prix Supersonic is undoubtedly the fastest tire option for pure speed performance in racing situations. With maximum speeds in mind, we dispensed with puncture protection and designed the tire for just a limited number of racing kilometres – just like the tire developers do in the Formula 1 industry. As a result, the Grand Prix Supersonic is not a training tire. It makes top speeds irresistible, but is only recommended for individual races or road races on smooth circuits.

The racing classic
Its name is legendary. The Continental Grand Prix was the first open wire tire (clincher) to enter into the world of road racing. Its extremely high mileage performance and renowned puncture and cut resistance make the Grand Prix an ideal competition and training partner. From amateur races to Alpine marathons, Grand Prix is at home in all situations.

Race Tires

Ultra GatorSkin

 DuraSkin™

Ultra 2000

UltraSport

UltraSport Hometrainer

The kilometre king
A durable carbon black compound, good puncture protection and the DuraSkin™ fabric make the Ultra GatorSkin a veritable kilometre eater. Available in widths from 23 mm to 32 mm, it can be used on the way to the office just as well as for serious training or when touring with baggage. An immensely popular tire, durable, rugged and at a good price.

Training can be racing too
Lightweight version of the Ultra GatorSkin™. Ultra 2000 is distinguished by its lightweight carcass and durable tread. Ideal for a quick round of training after work. And when it's time to head home, you'll be the first one back. Available in wire or Kevlar bead.

Train like the professionals
An attractive tread design and a choice of coloured treads can turn any race bike into a superb visual masterpiece. UltraSport tires make a stunning impact on every training ride and are ideal for newcomers to road biking. In addition to the UltraSport colour versions, the UltraSport Kevlar tire incorporates a Kevlar breaker (belt under the tread) for extra protection against punctures.

The roller tire
With a modern roller and the UltraSport Hometrainer in the house, winter can set in when it wants to. Thanks to its special cold-running compound, the UltraSport Hometrainer doesn't experience the heat buildup of a road tire, nor does it suffer the tread separation that the road tire is prone to under the special loads occurring when in cycling and braking on the roller's revolving drums. The UltraSport Hometrainer has been designed explicitly for rollers and is not suitable for on-road use.

They are built by Continental AG's proudest hand stitchers and vulcanizers. They are ridden by the world's best cycling pros. Tubular tires from Continental – Unbeatable!

Germany, Continental production plant, Korbach 2004

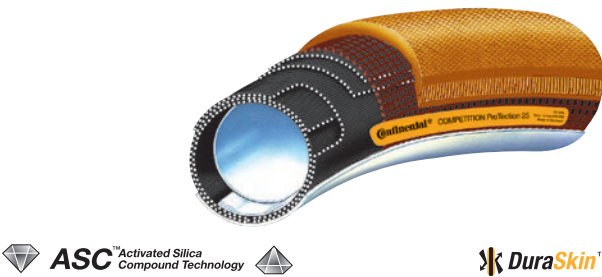

Tubular Tires
for the road

Competition

The Tubular Tire of the professionals
Jan Ullrich, Erik Zabel and Tyler Hamilton are just some of the famous pros who place their trust in German craftsmanship. The Competition is true professional material. No experiments – just performance based on experience. A fine, resistant carcass, two puncture protection plies, a synthetic rubber tube and 14 m of nylon thread bear our sporting heroes reliably through the classics and national tours.

Competition ProTection

At home on the roads between Paris and Roubaix
Modelled on the Competition, the Competition ProTection is equipped with our patented DuraSkin™ sidewall protection. Most tire failures on the route Paris-Roubaix are not caused by punctures but by cuts in the sidewall. With the Competition ProTection, we were once again able to reduce the number of flats during the 2004 Paris-Roubaix tour in half, making cyclists with Continental tires by far the best and most reliably equipped participants in the peloton.

Sprinter

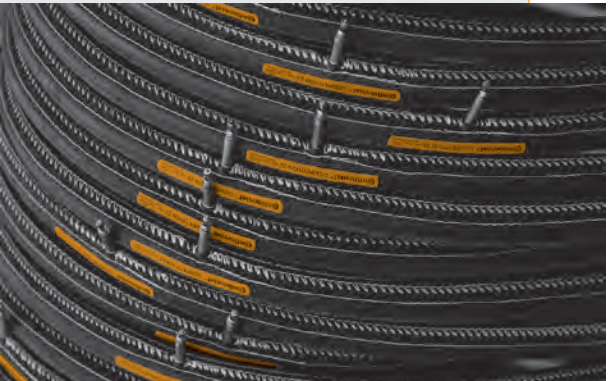

Suggestion – HANDMADE IN GERMANY
Its name says it all, the Sprinter is a racing gem of a tire. Affordable yet tough, grippy and lightweight, the Sprinter is recommended for all types of riding carried out by road enthusiasts from 200 km training rides through to 40 km high speed criteriums. With its high pressure capabilities and great acceleration, it'll be the fastest tire in the last 400 metres.

Tubular Tires for the road

Podium

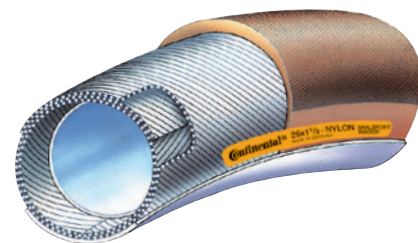

Giro

Tubular Tires for indoor sports

Saalsport

The time trial specialist

When designing the Podium, we took the Sprinter as a model and slimmed it down even further, with a thinner tread layer for an even faster ride. Built to be a pure competition tire for the race against the clock, the Podium is no training tire. Durable tread for use in long distance time trial events and bad surfaces, the Podium will provide performance over many racing kilometres.

Tubular training tire

Tubular tires are used mainly in competitions because of their excellent rolling characteristics and very good run-flat properties. With the Giro, you can rely on these features also when training. Produced somewhat more simply, but still rugged and durable.

Tire for trick cycling, cycle ball and bicycle polo as well as indoor wheelchair sports

The Saalsport adheres very well to all hall floors while leaving no visible marks. Its exceptionally strong carcass withstands the extreme loads it is subjected to in indoor sports and the high lateral forces in wheelchair sports. The Saalsport tire is glued as a tubular tire to special tubular tire rims, which is the only way to ensure that the tire does not jump off the rim on tight corners. Our experience has shown that a glued tubular tire is an absolute must for wheelchair sports.

Tubular Tires for the track

Olympic

World champion and Olympic victor time and again
Tubular tire for all track disciplines, manufactured using an exceptionally sophisticated process. Its extremely strong carcass permits inflation pressures of up to 15 bar. At the same time, the carcass has been optimized for exceptionally low rolling resistance and minimum weight. Our ASC™ silica compound provides reliable grip on wood and cement tracks.
The Olympic is the absolute top-of-the-line from the tubular tire manufacturer in Korbach, Germany. When a tenth of a second makes the difference, each component must be selected and mounted by hand.

Sonderklasse

Continental-Sonderklasse:
The classic for 6-day races
If the wheels never come to a stop, you can rely on Continental. The professional mechanics in the smoky halls of the six-day events have placed their trust in the Sonderklasse for generations of cyclists. With its fabric of finely wound cotton yarn, it provides a comfortable ride, even at high inflation pressures.

Tempo

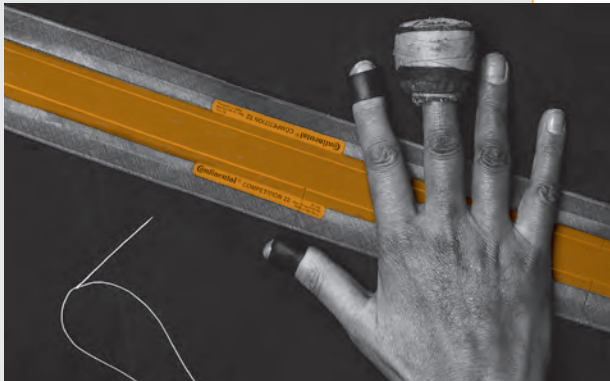

The track tire for Alpe d'Huez
As a very lightweight and fast track tire, the Tempo gathers medals at international track events again and again. It has already contributed to victories on mountain stages and time trials in the Tour de France, demonstrating its versatility. But be careful! The Tempo is a pure competition tire and was designed for the track. We explicitly do not recommend it for amateur sports on the street.

The home terrain of MTB tires is utterly unpredictable – quite as unpredictable, in fact, as the bikers' individual riding styles. The very latest CAD is, of course, used to shape tread patterns like the GravityArc™ and EndlessEdge™, but it is out on open trails around the world that we get the inspiration for these tires and later test them.

To make sure no time is lost in implementing improvements, we maintain the sole MTB tire production facility in all of Germany. There we manufacture the prototypes for our later production stars and for Continental's – absolutely exclusive – featherweight Supersonic models.

Germany, Continental production plant, Korbach 2004;
production section for Supersonic and UST MTB tires

Mountain Bike Tires

Mountain Bike Tires

Diesel

Petrol

Gravity

Flow

The Freeride Powerplant

A 2.5 tire has to withstand a lot of heavy freeride abuse, that’s obvious! The Diesel doesn’t just withstand a lot, it is lightweight as well. The Diesel excels not only on downhill stretches, but it makes things a whole lot easier when heading uphill too. A true all-rounder. The favourable wire version was equipped with additional reinforcement for bike park use, where the only thing that counts is the durability measured in drops and jumps.

Wide and fast

Wide tires don’t have to be heavy. The Petrol gets along with less tread depth. No problem on dry and rocky trails. For its width, it is very light and will speed up your freerider like no other tire. The shoulder blocks are based upon the GravityArc™ tread concept, ensuring that precious speed can be maintained when cornering.

Biking pleasure on all trails

Tires of the width 2.3 are versatile. They can be used on low mountain trails just as well as the Alpencross. The round tire cross-section typical for Continental and the GravityArc™ tread lead to playful handling. The tire can be turned easily in curves and reliably sinks its claws into loose surfaces. The Gravity’s aggressive appearance does not contradict its running smoothness – an advantage that is appreciated especially on asphalt stretches. Incidentally, it’s the tire selected by a certain Greg “HB“ Herbold.

Go with the flow!

Forests and forest paths are their turf. The Flow is your reliable companion. A tread with low rolling resistance, light weight for a 2.3 tire and an effective profile is the combination that paves the way on a gravel track. The right tire on the “forest motorways“ in low mountain ranges.

What makes Pro and ProTection so excitingly different?

Continental builds a wide variety of Mountain Bike Tires. The same tread pattern can be combined with different beads, carcass structures and compounds. Taking our Explorer tire as an example, the following design options are available to you :

- Explorer:

Wire-beaded 84 tpi carcass for rugged athletic use.
- Pro:

Lightweight 170 tpi carcass with foldable Kevlar bead and an adhesion-optimized compound for extra grip in competition events.
- ProTection:

Lightweight 170 tpi carcass with light, foldable Kevlar bead, DuraSkin™ sidewall protection and wear & puncture-resistant rubber compound.
- Supersonic:

Weight-optimized version with 170 tpi carcass and foldable Kevlar bead.
- UST:

Tubeless version with 310 tpi and foldable Kevlar bead.

Note: all our carcasses have a carcass angle of 45°. This thread angle alone achieves the optimum compromise between high carcass flexibility, low rolling resistance and good cornering stability.

Mountain Bike Tires

The ENDURO specialist
GravityArc™ Profile paired with the 2.1 carcass turns the Vapor into a marathon tire. Reliable, smooth-rolling and non-skidding on all surfaces.

For cross-country and marathon
Lighter weight than the Vapor but with similar applications. The centre of the tread uses flatter lugs to keep the rolling resistance and weight down to a minimum. If you want to take the lead on dry surfaces, use the Leader.

The modern classic
The Vertical has everything a classic tire needs. It is at home on all trails, really showing what it can do when the terrain turns rugged. Still the top choice for tours in Alpine terrain where low weight and high puncture protection are paramount.

The all-round athlete
Exceptionally successful all-round model with neutral handling characteristics and super rolling comfort. The effective EndlessEdge™ tread works very well in loose & muddy terrain and is combined with various carcasses, resulting in numerous versions. An absolute highlight of the Explorer Supersonic. With 440 g, a true cross-country and marathon tire.

Mountain Bike Tires

Twister Supersonic

EndlessEdge™

DuraSkin™

Supersonic

The speed maker
A tire for cross-country competition in dry/hard conditions. Lowest possible rolling resistance with sufficient grip. The Twister Supersonic is a true tuning component. Weighing in at a mere 370 g, it doesn't slow things down in the least. But beware! Little puncture protection.

CrossCountry

The special tire for muddy trails
Ideal for deep surfaces and mud. The tire sinks in until firm ground ensures traction. The CrossCountry makes it possible to ride cyclo-cross races with the MTB.

Double Fighter II

The urban Amerindian
The Double Fighter is back! In a sturdy gumwall design for urban biking. It rolls smoothly and quietly on asphalt. Its side cleats give it the right tracking bite on park and gravel paths. The ideal combination for turning a cleat-proven all-terrain wheel into one good for zipping around the metro area.

Traffic

EndlessEdge™

Aggressive looking MTB tire for on-road use
The tire for daily use on the mountain bike in the city and country. The tread with centre rib ensures a smooth and comfortable ride on the street. Thanks to its exceptionally robust sidewall, it can cope easily with everyday stress. For those riders who wish to keep the aggressive look of their MTB whilst requiring faster on-road performance.

Mountain Bike Tires

Spike Claw

The MTB tire for true Vikings
Studs in the tread bars provide grip on ice and snow. Thanks to its open tread, it has good self-cleaning properties and gets where it is going in mud and snow. The Spike Claw barely sinks into the surface by virtue of its large volume. Available with either 120 or 240 studs of hardened steel.

Grand Prix

The road racer
The successful racing tire model for the mountain bike. Extremely low rolling resistance and good puncture resistance. The tried-and-tested tire for training on the road.

City and trekking tires are pretty much expected to offer a little bit of everything. Reliable traction & steering, even with shopping bags slung around the handlebars, puncture protection on stretches as rough as Australia's thorn-strewn paths, and high-efficiency when vying for the distinction of world bike messenger champion. All of this is a piece of cake for our Contact series of tires.

Touring and City Bike Tires

[illegible]

by Continental

Come what may – we have the right recipe for dealing with offbeat tire breakdowns:

12-month puncture guarantee.

When is cycling the ultimate thrill? Above all, when you don't have to give a thought to punctures. Effective immediately, Continental guarantees the following:

The SafetySystem Guarantee.*

In the event that a foreign object punctures or cuts into your tire despite our SafetySystem breakdown protection, we'll replace the tube and the tire – at absolutely no cost to you!

The SafetySystem Guarantee is available only from Continental. It is offered on all city and trekking tires with SafetySystem breakdown protection. For a whole 12 months. Come what may.** Look for the guarantee slip on the tire!

* NOT IN ALL COUNTRIES AVAILABLE – please contact your distributor
** The guarantee does not cover damage attributable to insufficient inflation or vandalism and other personal injury or material damage, e.g. to clothes or the bike, or any charges for labour levied by the bike dealer. Refer to the SafetySystem Guarantee guidelines for further details.

Touring and City Bike Tires

*NOT IN ALL COUNTRIES AVAILABLE – please contact your distributor

Fast, safe and comfortable - guaranteed!

The Contact is the jack-of-all-trades amongst city and trekking tires. Its tread has been designed based upon the principles of bionics. A uniform centre tread/belt assembly ensures a smooth and speedy ride on the road. Flexible shoulder lugs and fine sipes guarantee grip in curves and on loose surfaces. The tire construction itself rounds off the overall high quality. Ultra fine carcass fabric reduces the rolling resistance while providing a noticeably more comfortable ride. We are so convinced of its SafetySystem puncture protection that we offer a 1 year guarantee against tire failure.

Extremely puncture-proof and with the SafetySystem Guarantee!*

The chic and sporty city speedster

You don't dream of using the car as a means of transportation in the rush hour? Then the CityContact is just what you are looking for. Thanks to its slick tread, a lot of rubber comes into contact with the road surface on hard asphalt. Despite the enormous grip, the rolling resistance is minimal. Fit your bike with the 54 mm version, and this wide tire will give you a totally new ride experience. Irregularities in the road are dampened, so your back and wrists are treated gently.

Extremely puncture-proof and with the SafetySystem Guarantee!*

The globetrotter

You can't develop a tire for globetrotters on the drawing board. So that is why all of Tilmann Waldthaler's experience has been put to use in the development of the TravelContact. His requirements were obvious: a robust carcass with a high carrying capacity and protection against chafing and cuts, effective puncture resistance and last but not least, a tread that makes it possible to explore paths around the world quickly and safely.

A foldable version is of course also available to take along as a spare. The TravelContact is ideal for touring all kinds of routes – be it along the Weser River in Germany or the Pan Americana.

Extremely puncture-proof and with the SafetySystem Guarantee!*

Touring and City Bike Tires

Traffic signal sprinter!
The SportContact turns any bike into a racer. The 26" version helps the bike messenger meet those deadlines while the 700C tire gets the fitness biker into a speed frenzy. All this added speed for your bike with zero detriment to puncture protection and reliability! Extremely fine and strong carcass plies, SafetySystem puncture protection and reflector strips are all integral features of the Contact tire family.
Extremely puncture-proof and with the SafetySystem Guarantee!*

The utmost in safety thanks to an extra thick puncture-proof breaker
Designed for industrial applications, the ContactSecurity can also perform well in everyday use. Its massive puncture-proof breaker was developed to resist metal cuttings and shards on factory grounds. In view of its tough construction, it is not a comfortable touring tire with low rolling resistance, but it does effectively ward off gravel and shards on short stretches in the city.
Extremely puncture-proof!

*NOT IN ALL COUNTRIES AVAILABLE – please contact your distributor

Touring and City Bike Tires

TourRIDE

Versatile, safe and durable
The TourRIDE has all the features a true touring tire should have at a top quality level – a tread for all road surfaces, good puncture protection and high mileage performance.

CityRIDE

The robust and nimble tire for the city
A safe and comfortable bike ride through the city – that’s what you can expect with CityRIDE. Its flatter profile ensures a large contact area on asphalt and low rolling resistance.

CountryRIDE

The trekking tire for recreational riding
If you really want to enjoy the landscape on your tours, the CountryRIDE is just the right tire for you. On asphalt, the tire rolls on the centre strip with low rolling resistance. As soon as you head onto loose paths through fields and forests, the tread blocks on the shoulder of the CountryRIDE take grip.

Touring and City
Bike Tires

Double Fighter II

For sporty ATB and trekking bikes
The new Double Fighter is modelled on the successful concept of its predecessor. The centre with its light tread rolls smoothly and quietly on asphalt. Off-road, the shoulder's heavy tread provides the necessary grip. The Double Fighter II playfully combines high speed on the road with reliable grip on off-road terrain, so it is also suitable for MTBs that are used mainly on the street or for offroad in dry, summer conditions.

Twister/Twister Pro

For trekking bikes and cyclo-cross
When your trekking bike sport tours take you not only on the road but also into forests and across hills, the Twister is what you need. With its EndlessEdge™ bars, it provides reliable grip on any surface. On the 32 mm version, the bars are higher and positioned farther apart. Thanks to its even better off-road grip and good self-cleaning properties, the 32 mm Twister is pre-destined for cyclo-cross usage.

Town & Country

Your friend and helper
Police bike squadrons throughout the world use the Town & Country. Its high mileage, puncture resistance and last but not least low rolling resistance make the streets safer.

Nordic Spike

The studded winter tire
The studded bike tire officially approved for road use. Available with 120 or 240 studs of hardened steel, making it possible to bike through ice and snow.

Touring and City
Bike Tires

TopTouring 2000 Reflex

The touring tire classic
Its dynamic tread, the 2-ply nylon puncture protection and its Skinwall sidewall make the TopTouring 2000 a tire for the touring experts. Reliability, speed and versatility are attributes that continue to ensure the tire's popularity.

Zeta

The comfortable tire for recreational riding
Its harmonic tread graces any wheel. It's advantages are best put to use on classical touring and Dutch bicycles. No wonder that the Zeta is one of the most popular tires in the Netherlands.

TPI

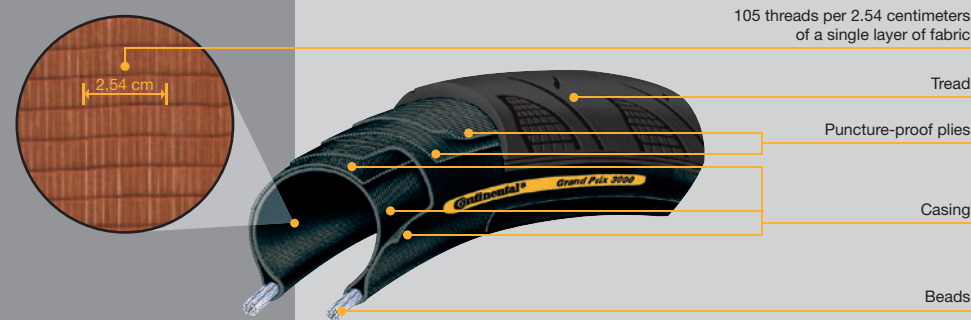

Tire carcass design and specification for Continental bicycle tires

Tpi (threads per inch) denotes the density of threads in a tire's casing fabric. There are four fabric classes: 15 tpi, 30 tpi, 60 tpi and 100 tpi. These tpi values refer only to a single layer of stretched fabric. The more tightly woven the fabric, the more flexible and puncture resistant the tire. The coarser the fabric, the more rigid and cut-resistant the tire. It all depends on how good a hand the manufacturer has in achieving a fabric with an optimum combination of low rolling and high puncture resistance. In the case of Continental bike tires, the tpi value describes not only the respective fabric category but also the total sum of all threads in all fabric plies for a 2,54 cm (1 inch) section of tire.

Tire construction in detail (crown turn-up construction) The example of the Grand Prix 3000

The Grand Prix 3000 is specified at 5/430, i.e. 5 fabric plies (3 x carcass, 2 layers of anti-puncture protection). This means it has a total of 430 tpi under the tread, which can be broken down as follows:

2 x anti-puncture reinforcement:	fabric	60 tpi
3 x carcass:	+ fabric	105 tpi
Total in green tire (prior to vulcanization):		435 tpi
Total after vulcanization:		430 tpi

DuraSkin™

Patented and lightweight sidewall protection

DuraSkin™ = Continental's patented polyamide layer that provides excellent sidewall protection without adding extra weight or compromising supple ride quality.

Improved sidewall protection

An extremely durable polyamide fabric that protects the extra-fine, high-performance casing from cuts, punctures and abrasion.

Lightweight durability

Continental's proprietary production process applies the DuraSkin™ fabric to only the exposed sidewall area resulting in a mere 10 grams of added weight.

All new appearance

DuraSkin™'s mesh layer adds a high-tech look to our entire line of performance MTB tires.

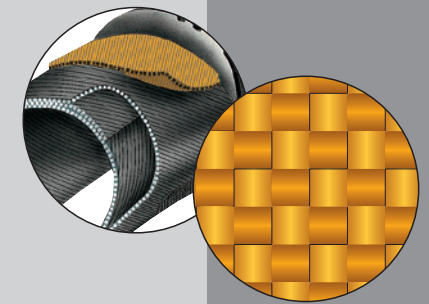

The term ProTction indicates that a tire has DuraSkin™ technology.

SafetySystem

The system for puncture protection

- The SafetySystem Puncture Protection is made of a strong and tight Nylon fabric. This fabric is additionally reinforced with Kevlar. The result is a tire construction that is highly resistant against pinches and cuts.
- The SafetySystem protects the tire against debris, thorns and broken glass.
- The SafetySystem keeps the tire lightweight and flexible. It adapts to the rolling motion and keeps the rolling resistance low.
- The SafetySystem is build in between the tread and the casing. Here it protects the casing fabric and contributes to a long lifespan of the tire.

SecuritySystem

Maximum protection

When the conditions are the worst and only the maximum puncture protection will get you where you want to be, Continental SecuritySystem is the reliable answer. SecuritySystem utilizes an extra-duty, highly elastic casing belt that is virtually impervious to thorns, glass and other road debris.

TPS TirePositioning System

TirePositioningSystem™

- TPS™ is the systematic approach that puts race tires on a new performance level.
- The specifically designed front and rear tire team up perfectly.
- The lightweight 22 mm front tire attacks tight turns in dry and wet conditions aggressively – thanks to a sticky natural rubber compound which you can depend on.
- The 23 mm rear tire's hard wearing compound gives thousands of miles of service at competition level and puts your force (energy) into speed. The 1 mm wider casing provides the suppleness to endure the stress of long hard racing.

GravityArc™

GravityArc™ tread – Design for superb efficiency

- Natural material shaping helps to spread the stressing more evenly.
- Roughened 3-D surfaces in the tread base improve the positive engagement between tire and terrain.
- The characteristic arches reinforce the lugs, so that they can get a better hold.
- The gripping edges of the tread work according to the Endless-Edge™ principle. They counter the forces acting on the tread and ensure the tire stays in contact with the surface.

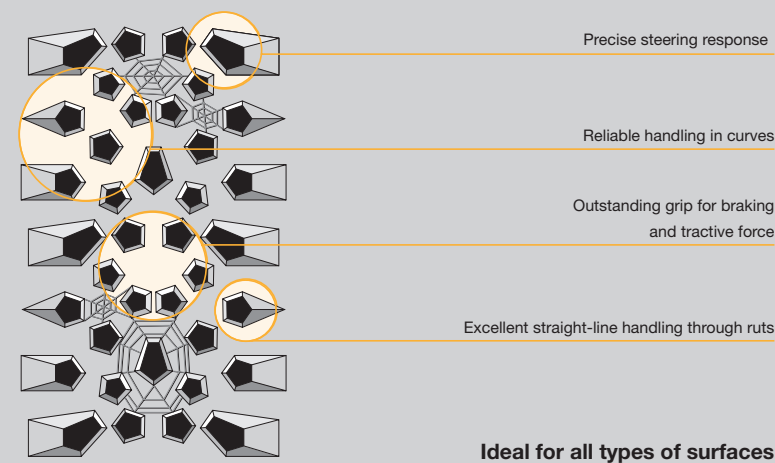

Continental's revolutionary tread design for Mountain Bike Tires

EndlessEdge™ = Specifically shaped knobs with five edges and five corners for superior handling in all conditions.

- The arrangement of the knobs provides superior traction on all surfaces. At every leaning angle the edges of the knobs are rectangular to the incoming accelerating, breaking and steering forces. This way the knobs can deliver the forces to the ground without breaking loose.
- The five corners of the knobs enable the tread to dig and sink into wet and loose grounds more easy.
- The arrangement of blocks gives the tire – besides its superior traction – a comfortable ride and low rolling resistance on hard packed surfaces.

The ultimate speed experience

With Supersonic you're in on the ultimate speed experience. Whether in races, time trials or marathons, the Supersonic product line for racing bikes and MTB gives you extra thrust.

Every Supersonic product is uncompromisingly optimized as far as weight and rolling resistance are concerned.

All components of the Supersonic tire and tube were individually reduced in volume and weight to what is absolutely necessary and technically feasible. This affects, for example, the thickness of the tire casing topping, material distribution of tread rubber, the thickness of the tread compound and the thickness of the tube walls.

Of course, only highest-quality materials are used: highly refined polyamide for the carcasses, the famous ASC™ (Activated Silica Compound) technology or the tried-and-tested EndlessEdge™ tread pattern design.

Radically optimizing a tire in terms of weight and rolling resistance means, of course, cutting back on other tire properties. In terms of mileage and puncture resistance, the Supersonic tires do not measure up to the proven quality of their corresponding all-around tires.

Our engineers and chemists have turned out superlative technology here, ensuring Supersonic products a top position in racing and tuning. Hobby athletes can also benefit from our innovative capabilities, however, through Continental's various well-balanced alternatives that satisfy virtually the whole range of racing-tire demands.

Continental's Activated Silica Compound Technology

The performance of a rubber compound depends heavily on the type of rubber and reinforcement materials used. Carbon black is the most commonly used reinforcement and filling material for rubber (this makes tires black). Instead of carbon black either silica or sometimes chalk can be used when colored tires are desired. Therefore the use of special silane is needed to increase the bond of silica to rubber. This is called activation.

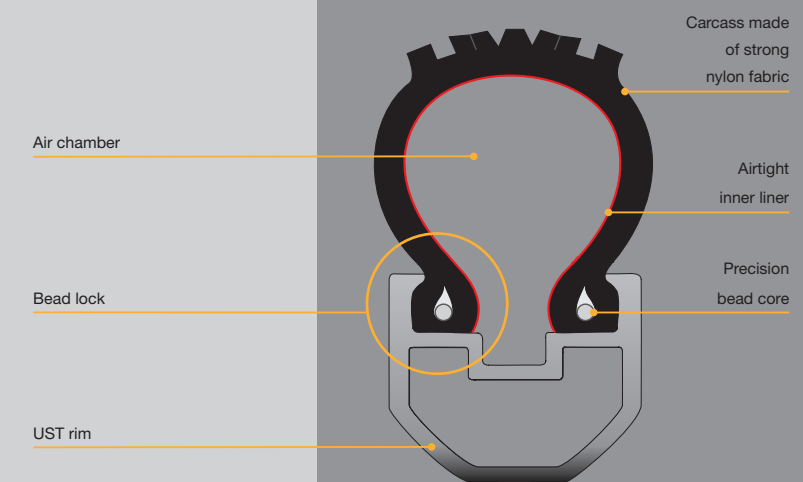

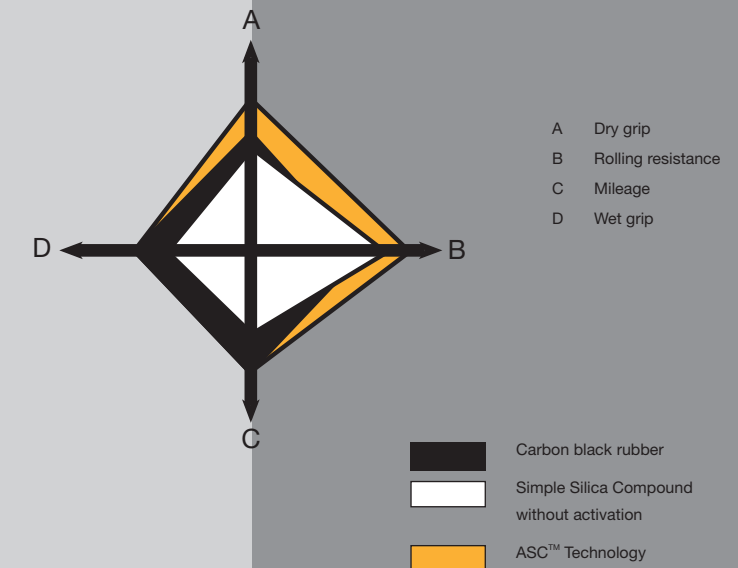

Advantages of ASC™ Activated Silica Compound Technology

- Outstanding handling and impressive cornering safety because of further improved dry adhesion
- Reduced rolling resistance
- All other characteristics as known from the other fine Continental tires

Continental Tubeless Tires for the Universal System Tubeless

- Tubeless Tires by Continental work with both UST and Rigid / Nagesti rims and wheels.
- Tire and rim form an airtight chamber. A tube is not necessary and pinchflats not possible anymore.
- In comparison to the conventional system, the tire pressure can be lowered. The comfort of the ride increases.
- At a lower tire pressure the tire deflects more. The contact patch of the tire increases and the tread adapts to the ground better. Tubeless tires allow decreased air pressure and therefore deliver more traction.
- The airtight layer on the inside of the casing can be repaired with ordinary patches just like a tube.

Information on tubes

- Bicycle tubes are among the top sellers in your specialist shop. Bike tubes are calling cards for walk-in-customers and a recommendation accepted in good faith by regulars.
- To give your recommendation that special note, we're also offering you light and Supersonic lightweight tubes, in addition to the classic butyl tubes, under the Continental Unitube System.

The advantage of the Continental Unitube System

- Multi-size tubes allow greater compatibility with more tire sizes, and fewer tubes.
- Unitubes are available in both Schrader and Presta valve tubes. Presta valves are available in a variety of lengths.
- All tubes are seamless and mold-cured (vulcanized) to ensure uniform roundness and improved reliability at the valve stem.
- Each and every tube passes a stringent 100% quality control inspection.

Accessories

Windbreaker jacket

- Windbreaker Jacket with large, zippered pocket on the back, tunnel collar and reflective stripes for safety at dusk.

Cycling vest

- Full-function cycling vest with windstopper front and yoke, breathable mesh back and tunnel collar.

Cycling jersey

- Cycling jersey with smart new design, longer zipper and three rear pockets including a zipped pocket for carrying essential small items such as cash, credit cards and identification cards/documents.

Bib cycle shorts

- High-quality bib cycle shorts with anti-bacterial treatment, black with small Conti yellow patch.
