At 210 grams, Easton's DeltaForce is the lightest bullhorn available. The DeltaForce features Carbon Nanotube (CNT) monocoque construction; aggressive aero styling with multiple hand positions; and internal cable routing compatible with brake levers that are internally or externally mounted. DeltaForce bar shown above with AeroForce carbon clip-ons. Combined weight: 520 grams.

HOT WINGS. FREE WRAP.

Introducing Easton's new EC70 Wing Bar...with free bar tape!

Every curve of the new EC70 carbon road bar is shaped to enhance rider comfort and performance. The wing-shaped top provides comfort and stability for your hands. The unique flat front allows for integrated cable routing without grooves or holes that weaken the carbon structure. At a mere 230 grams, the EC70 offers all the strength and reliability that Easton is famous for. Buy an EC70 before June 30, 2005, and we'll throw in some superior Easton bar tape plus a \$10 discount on the EC70 bar—that's a \$199.99 value for only \$179.99! Get ready to cook!

Small

Easton Is Engineering From The Atom Up

For decades Easton has been thinking big. To take the next step in carbon component technology however, we realized that it was time to start thinking smaller — MUCH smaller.

To radically improve strength and toughness in carbon-fiber components, Easton engineers have developed an innovative Enhanced Resin System using carbon nanotubes (CNT). Carbon nanotubes are an array of carbon atoms arranged in a pattern of hexagons and pentagons. These structures are manufactured in tubular shapes a few billionths of a meter in diameter. Many scientists believe carbon nanotubes may be the strongest fiber that will ever be made.

Easton's proprietary process impregnates the resin/fiber matrix with evenly distributed carbon nanotubes. This greatly improves the toughness and strengthens Easton's already legendary components.

Avoid confusion — look for the CNT logo to assure that you are buying REAL carbon nanotube technology.

Carbon nanotubes have a strength-to-weight ratio hundreds of times greater than steel.

TWO TRUE

TRUE: Easton high-performance wheels are hand built by skilled craftsmen. Using patented Velomax hub technology and superior wheel components, spoke tension is precisely dialed in. These exacting standards assure optimal wheel performance and longevity. Uniform spoke tension is the key to a reliable, superior wheel that carves corners in perfect harmony with the rider—and stays true, too.

Ascent II wheelset

Featuring Twin-Thread Technology (T3), double-butt spokes (18 F/24 R), and sealed-cartridge bearings with asymmetrical low-drag seals. 1419 grams.
