06

IRON HORSE  
BICYCLE CATALOG

**From the Employees of Iron Horse**

Thank You.

Thank you to all of the riders who pushed their limits on the Sunday, and upped the ante on the DH course.

Thank you to everyone who stepped up to perform on bigger drops, steeper chutes, and more technical terrain than they could have imagined riding before; that's why we built the 7POINT.

Thank you to all of the riders who refused to be defined as a XC geek or a gravity freak and instead explored every bit of terrain they could find on their MkIII.

Thank you to the riders who pushed their limits, but not their bikes, on that huge climb. Thanks for going faster and further on the Azure.

Thanks to every rider and every dealer who chose Iron Horse over the past year. We love to ride, and we love to know that our passion will make your day on the bike that much better. So whether it's a Maverick, Yakuza, Warrior, Adventure, or Triumph - thanks for making us part of your ride.

Sincerely,

*The Team at Iron Horse*

In 2005 we revolutionized suspension and bicycle design. In 2006 the revolution continues!

Our line up has expanded to meet the diverse needs of riders. If you are looking for world class suspension designs, great performance, and great value, Iron Horse can meet your needs. Improvement comes from constant evaluation of existing ideas and a refusal to settle for the status quo. The 2006 line up is a result of that mind set.

Our commitment as a company is to make the best performing bikes in the world. No matter if it's climbing or descending, we want our bike to make you faster. We think the key to making you faster is to make you more efficient on your bike. This is where suspension engineer and frame designer Dave Weagle comes into the picture. By incorporating Dave's revolutionary *dw-link* suspension system into our premier bike lines, we are confident that our bikes will allow you to maximize your efforts and speed on the trail. Our *dw-link* bikes for 2006 include the 8" travel Sunday DH race platform, the 7" travel 7POINT freeride line, the 5" travel MKIII trail bikes, and the 4" travel XC race inspired Azure.

Of course we realize that just innovating at the top end is not enough. Our Yakuza and Warrior series of bikes provide exceptional performance and spec at an incredible value. The Yakuza Kumicho has expanded to include a both a "Race" spec, as well as a more economical version. The Warrior series includes the addition of a new 6" all mountain bike named the W-Six. Even our entry level Maverick series now offers a 4" suspension frame!

We have been busy on the road and pavement side too, with an all new range of performance oriented road bikes named Excelsior, a new flatbar version of our popular Triumph model, and revised frame for the Adventure series.

2006 is the most complete line-up we've ever offered. You name it, we have it. The best performance, the best designs, the best value - that's what Iron Horse is all about.

*ride the revolution*

# WE LOVE THE SUNDAY DH BIKE

The **clu\*link** designed suspension gives me the confidence to take it over anything I need to. It pedals like a hardtail and tracks awesome on any off camber terrain."

# THE REVOLUTION BEGINS NOW

In 2006 Iron Horse is more committed than ever to rocking the mountain bike world! The performance and design of our bikes is world class, the direct result of feedback and input from our pro riders and racers. For 2006 we will be racing faster and going bigger!

Team Iron Horse/Mad Catz is one of the world's top professional downhill squads. Competing around the world in the sports premier events, Iron Horse/Mad Catz riders are familiar sight on the podium. During the '05 season Sam Hill chalked up his first World Cup win at Schladming, Austria, his second World Cup win at Pila, Italy, and took home his second straight win in the US Open of Mountain Biking. 2004 Junior DH World Champion Scarlett Hagen is bringing a fresh face to the women's DH field with several podium finishes in '05, including a 2nd place finish at the Angel Fire, New Mexico World Cup round. Justin Havukainen has been laying down fast times and going large for the cameras.

The Iron Horse/Mad Catz Team thanks its sponsors for their continued support and excellent products that raise our game to podium level every race day! 2005 Team sponsors are: Iron Horse Bicycles, Mad Catz Interactive, Monster Energy, Progressive Suspension, Sram/Rock Shox, FSA, Maxxis, DT/Swiss, FUNN, SDG, Game Shark, Hayes Brake, Minoura, Maxima, Crank Brothers, Troy Lee Designs, KMC Wheels, Freestyle Watches, Alligator Cables, Rip Curl, and e.thirteen Components.

In addition to our World Cup downhill team, Iron Horse also sponsors a broad range of pro freeriders, dirt jumpers, street riders, and racers who are pushing the boundaries and definitions of the sport of mountain biking. Among these revolutionary riders are Collective film star Jordie Lunn, slopestyle innovator Eric Porter, Chris Glew & the Freeride Tours team, Northeast downhill pros George Ryan, Todd Bosch, and Derrick Nobman, and 10 time New England XC Series Champion Salem Mazzawy.

Iron Horse is also committed to grassroots cycling and growing the sport of mountain biking. Iron Horse is a proud partner of Diablo Freeride Park at Mountain Creek, NJ, host of the US Open of Mountain Biking. Diablo is our official R&D center and demo facility on the East Coast. Our product department heads to Diablo almost every weekend to put bikes and components through their paces on Diablo's famous Dominion jumpline and technical rock garden trails. Iron Horse's "Riders of the Revolution" program includes pros like Simon Lawton, who teaches clinics and instruction sessions for riders in the Pacific Northwest that are looking to learn or improve their "ride".

# dw-link

Dave Weagle's *dw-link* suspension system may be the single most significant advance in bicycles since the advent of suspension in the early 1990s. Widely heralded by professional racers and everyday riders for its performance traits, the *dw-link* actually accomplishes what other suspension systems have pretended to do for years. All Iron Horse Sunday, Azure, 7POINT, and MkIII bikes are equipped with the *dw-link* suspension system.

## THE PHYSICS OF CYCLE SUSPENSION

Here's how *dw-link* works: Consider the following basic principles of physics as they pertain to bikes:

- 1) Every rider has a mass. For a person seated on a bike, a theoretical point just in front of his or her navel represents their "center of mass."
- 2) Newton's Third law of Motion states that "Every action has an equal and opposite reaction." When a bicycle accelerates forward, the rider's mass is transferred rearward. Without something to counteract this mass transfer, the rear suspension on most bicycles will compress under acceleration. This mass transfer as a reaction to acceleration is what riders have come to know as "bob."
- 3) "Pedal feedback" is a result of radically changing aligned chainstay lengths (the distance from the center of the BB to the center of the rear axle). The less radical of a change in aligned chainstay length, the less pedal feedback can be felt.
- 4) Extra damping is not a substitute for an efficient suspension system. Less compression damping lets your suspension react to smaller imperfections on the trail and aids in traction while cornering and climbing.

salem mazzawy, gets 'linked up' on his Iron Horse Azure

# TECHNOLOGY

## THE dw-link RIDE

ADVANCED PHYSICS > MARKETING HYPE

The *dw-link* is special in that it is the world's first and only suspension system designed specifically to counteract the effects of rearward mass transfer under acceleration. At the same time, the *dw-link* almost eliminates any perceptible pedal feedback in the system.

The *dw-link* accomplishes this through the use of an optimized squat profile (worldwide patent pending). This optimized squat profile actively cancels out the effects of acceleration on the rear suspension. This leaves the suspension able to react to the smallest bumps in the trail, without extra damping. While *dw-link* is possibly the world's most efficient suspension under acceleration, braking is optimized as well. The *dw-link*'s linkage layout is primed for hard braking when you need it most.

### Optimizing the ride:

Every *dw-link* frame design is optimized for its intended use through the application of complex computer analysis and a custom designed data acquisition system that measures performance on the trail. In fact, the *dw-link* is so efficient that most shocks supplied with *dw-link* bikes are custom-tuned units that run up to three times less compression damping than similar non-*dw-link* bikes.

### Bottom Line:

The result of all this mathematics is a ride that is so incredibly crisp under power, but able to respond to the smallest of bumps, that it must be ridden to be believed. Once you ride *dw-link*, no other suspension feels the same.

Don't believe us? Heard that before? We have too, hundreds of times. Go ahead and take a *dw-link* bike for a test ride, we guarantee that *dw-link*'s applied physics will beat out other bikes' marketing hype 10 times out of 10 on the trail. As long as you are smiling at the end of the ride, the *dw-link* has done its job!

### Ride on!

The *dw-link* suspension system is a complex innovation, to learn more please visit:

# SUNDAY

One of the most sought after DH bikes in 2005 is back; faster and more efficient than ever. Designed and perfected in conjunction with the Iron Horse/Mad Catz pro team, the Sunday is a purebred race bike, made for going downhill fast and winning races. The Sunday has been piloted to victories in World Cup races, the US Open of Mountain Biking, the Australian National Championships, and has seen a string of continuous podium spots stretching over the past two seasons.

Parts spec on the Sunday series was handpicked to provide the best performance on the race course and help shave time off the clock. The Sunday's *dw-link* suspension system, World Cup racing geometry, and top shelf spec are what make this bike the fastest on the mountain.

The Azure is our premier XC ride, representing the pinnacle of lightweight, short travel suspension design. The key word that defines the Azure is efficiency. Whether the bike is on a long sustained climb, traveling over uneven terrain or being pinned on weaving single track; the Azure offers maximum performance and speed. The heart of the Azure is the 90mm travel *dw-link* suspension system, which allows the rider a perfect blend of suspension that will keep them glued to the trail without sacrificing any pedaling efficiency. This makes the bike an ideal XC ride.

Of course, we also understand that shaving weight makes a huge difference on XC bikes. That's why every Azure features an impeccable selection of lightweight parts and custom butted tubing. When you combine this with the ground breaking *dw-link* technology, the Azure is truly a world class offering for the XC rider looking to push their limits.

Long technical climbs, technical descents, trail rides covering a wide variety of terrain; the MkIII is designed in the true spirit of the sport. The MkIII is built for the rider who regularly rides a variety of terrain, but doesn't want to invest in a fleet of terrain specific bikes. As with all of our premier bikes, the MkIII features the dw-link suspension system which allows for 5" of travel while providing the most efficient ride in the industry.

The part spec and frame design on every MkIII is designed around excellence in performance and ultimate versatility. So whether you're climbing or descending, on the flats, or riding wet roots, the MkIII can handle it all.

# 7POINT

du★link

When you make a 7" travel bike with the versatility of the 7POINT, people are bound to notice. With 7" of plush and efficient dw-link travel and a burly overbuilt frame, this bike can handle sketchy descents, big drops, jumps, and whatever else you can throw at it. This bike is perfect for a day-long freeride session at your local trail or a day of lift at your favorite bike park. Whether you need to pedal up before bombing down, or you decide to let the lift do all the work, the 7POINT feels at home in the nastiest of terrain.

The Yakuza series is built around strength, performance, and value for downhillers and freeriders who take the more challenging line, hit larger jumps, and land bigger hucks; without the huge price tag. The Yakuza range of bikes features three different frames (8" downhill, 7" freeride, and hardtail), all specifically designed for going big at your local freeride spot or favourite bike park.

In '05, the Kumicho broke new ground in the bike market as a top performing 8" travel DH bike that didn't blow the bank. For '06 we have expanded the series to ensure there is a Kumicho-style bike for every level of rider. The new Kumicho Type R is built to handle the needs of riders and racers looking for top spec on our proven 8" travel single pivot Kumicho frame.

The new Sohon Bucho uses the same frame as the Kumicho and the Kumicho Type R but costs significantly

less, yet still will perform at a top level on the downhill course or in the bike park.

In addition to the Yakuza downhill range, Iron Horse offers four more Yakuza models for riders who require a more versatile ride, with two chainrings and freeride geometry, but still need to go large on a smaller budget.

The Ojiki and Aniki share an overbuilt 7"travel single pivot frame that's strong enough to take whatever punishment you dish out, whether you're shredding the bike park or sessioning your local freeride spot. With a time tested single pivot design, the Ojiki and Aniki models are perfect for freeriders just getting into the sport.

The Bakuto and Chimpira are designed for riders who think you don't need dual suspension to go big. These hardtails are built with oversized tubing, 1.5 headtubes, proper gussets, and oversized stays.

# WARRIOR

## DUAL SUSPENSION

We know that many of the places that you ride feature a broad range of terrain, from technical descents to steep, rooted climbs. If you don't fall into any one slot, and are looking for great all mountain bikes at a great value price, then the Warrior Dual Suspension platform is designed for you. The Warrior dual suspension models feature a single pivot 5" travel frame design. The strategic placement of the pivot offers better pedaling efficiency and performance on the trails than other single pivot designs. We've also added a 6" travel single pivot model, the W-Six, for those rides when 5" just isn't enough.

## W-SIX

# WARRIOR HARDTAIL

The Warrior Hardtail series features 3D dropouts, oversized formed tubing, beautifully designed gussets, and a spec package that is truly great value. The Warrior Hardtails are available in Race, Expert, and Comp spec packages. Each has an outstanding spec package and will meet the needs of either the recreational enthusiast or the hardcore trail rider. Each model features 100mm suspension fork, disc brakes, 9 speed drivetrain, and splined interface cranks.

WHEELS	WTB SX24, ALLOY HUBS, STAINLESS SPOKES

Tried and true, the Maverick series returns for 2006 with a big addition to the family. As we looked around the market, we noticed that something was missing. Why is it that the recreational rider can't enjoy the experience of a quality dual suspension bike without spending a bundle? We've answered that question by adding two dual suspension models, in addition to three hardtail offerings, to our Maverick series for the recreational rider who wants a great quality bike for the path and the trail.

The Maverick dual suspension frames are single pivot designs with four inches of travel. They all feature full aluminum construction, as well as a sealed bearing in the pivot, and a replaceable derailleur hanger. The Maverick hardtail frame is a cross country inspired aluminum frame with replaceable dropout. They both offer the rider a quality ride, with a durable and extremely functional design. Great fun at a great price!

# MAVERICK

# ROAD RACE

The Iron Horse road line offers exceptional performance and top spec at a great price. Iron Horse road bikes all feature lightweight aluminum tubing, semi compact frame designs, 1-1/8" integrated head tube and handpicked components.

The Victory series is the pinnacle of our road line, race inspired and decked out with a selection of choice components. The Victory frame features Kinesium custom butted tubing and carbon seatstays which provide a lightweight ride with a supple feel. It also offers outstanding stiffness throughout the frame for excellent acceleration and efficiency. Add in a phenomenal Campagnolo component group and the Victory series is truly a model of speed and beauty.

"Excelsior", meaning "Ever Upward", is the motto of Iron Horse's home state of New York as well as a fitting description of the new addition to the Iron Horse road bike line. The Excelsior frame is a semi compact design with carbon seatstays, custom butted aluminum tubing and a 1 1/8" integrated head tube. The Excelsior comes in a Sport, Comp and Race spec versions; all featuring carbon forks with alloy steerers, Shimano drivetrain, lightweight road components, San Marco saddles and Vittoria tires.

# ROAD SPORT

For 2006, in addition to our popular Triumph Sport model, we have introduced the Triumph in a flat bar edition. The Triumph offers great performance for the commuter or the more casual road rider who needs an upright riding position. Both frames feature triple chainring cranksets and Shimano road derailleurs.

Also new for '06, the Triumph Tri has expanded into two new Tri<sup>2</sup> triathlon racing models. These frames feature 6061 aluminum construction, aero tube designs, tri specific geometry and a 1-1/8" integrated head tube. Both Tri<sup>2</sup> models feature carbon aero bladed forks, Syntace aero bars, Shimano Dura Ace barend shifters and SDG I-Beam saddle systems for the ultimate in light weight and adjustability.

# PAVEMENT

Whether it's riding around the block or riding to work, we offer a complete range of bikes that will make your ride comfortable, efficient and fun. The Iron Horse Sage is our comfort bike offering. It's the perfect bike for casual pathway and city riding. Details like an adjustable stem, comfort tread and a large comfortable Selle Royal saddle make this bike a real pleasure to ride.

For those folks who may be going a little further, and may want to go a little faster, we have our Adventure line of bikes. These bikes come equipped with 700c tires, alloy frames with fender mounts, suspension seatposts and comfortable saddle. The Adventure bike is the ideal bike for those looking to commute to work or go for a leisurely ride along the bike path.
